GENERAL INFORMATION

WELCOME TO SCHRACK TECHNIK

We are a leading, sales-oriented brand company from Austria specialising in the areas of energy, data and lighting systems. Our activities focus on products and solutions for energy optimisation, safety, data transfer and comfort. High-quality products, technical expertise and one-to-one customer service are at the fore of what we do.

SCHRACK PRODUCT QUALITY

We offer our customers a well sorted product range offering the highest levels of product availability. Our aim is ultra-efficiency when it comes to customerspecific solutions. This is possible thanks to standardized work processes, modularisation and the use of software aids.

SCHRACK ISO-CERTIFIZED

In recent times, testing procedures for ISO certification have shifted their focus very strongly on how organisations deal with customers, and the associated customer processes. Some of the major areas which are inspected include:

- General customer communication
- Dealing with offers and tenders in a structured manner
- Transparency in all areas of the company in direct or indirect contact with customers
- The above is required in all tiers of management

ISO certification is by no means the norm. Our ISO certification 9001:2000 is both a reward as well as an obligation. The obligation we have in accepting this certification is to ensure the documentation of our work processes and to continuously improve such processes.

GENERAL INFORMATION

- All **dimensioned drawings** are displayed within the confines of available space on the page and are only intended as a guide.
- All **circuit diagrams** are schematic wiring diagrams which are intended to allow better understanding of the function, and will need to be edited/added to during the course of project planning.
- All **images** represent samples of the product and are intended for information purposes only.

Unless otherwise stipulated, the current version of the General Terms of Delivery issued by The Association of the Austrian Electrical and Electronics Industries "FEEL" shall apply. No liability for errors in text, type or images; we reserve the right to make changes to technical specifications of the product range. The user information contained in this catalog reflect the opinion of the company at the time of writing. The information contained in it was assembled on the basis of published norms, specialist industry presentations, specialist literature and in-house expertise. The content is for informational purposes only and has no validity in law.

CERTIFICATIONS

EN 60439-3, protection class II

RANGE OF APPLICATION

The solid construction reliably prevents distortion through being packed in plastic foam or through walling in. As an additional protection, the side flanges are hidden in the central enclosure area during delivery. Given its flat design and neutral colour, the domestic enclosure fits well in the wall plaster surface. As an additional advantage, the flush-mounted enclosure (incl.cover) are packed separately from the parts that are later visible. Thus ensuring that these parts remain protected until installation.

INCLUDED IN DELIVERY

Enclosure, device carrier, anti-dirt- device cover, neutral- and protective earth conductor terminal, assembly instructions, fixing material for hollow wall mounting, mounting angles and self-adhesive labels with graphical symbols (pictograms)

WALL-MOUNTING ENCLOSURES

WSM SHEET STEEL ENCLOSURES WITH MOUNTING PLATE FOR WALL MOUNTING – continued

SCHRACK-INFO

- Material:
 - Body: 1,2 mm mild steel / 1,4 mm WSM6060210 and above / 1,5 mm WSM1008260 and above, and 400 mm depth enclosures
 - Gland plate: 1,4 mm mild steel
 - Doors: 1,2 mm mild steel / 1,4 mm WSM6060210 and above / 1,8 mm WSM1008260 and above, and 400 mm depth enclosures
 - Mounting plate: 2 mm galvanised steel
 - Body: Folded and seam-welded. Four instances 20,44 mm in diameter are provided to enable air circulation behind the enclosure when wall-mounted. These instances contain holes for wall-fastening, 8,55 mm in diameter.
 - Doors: Opening angle 130°. Covered and removable hinges allow doors to be affixed on left or right hand side. From size WSM6040150, the door comes with two removable door mounting profiles. The enclosure is sealed in polyurethane coating fully-packed in plastic foam to ensure seal-tightness.
 - Locking: Lock has double-grip to enable door to be opened easily, DIN lock with 5 mm pin and 90° dwell. From 1000 mm and up, 3 point lock rod. Other locks available as accessories.
 - Mounting plate: The mounting plate has markings every 10 mm to enable equipment to be more easily positioned on the mounting plate. There are holes below and above for fastening cables. The mounting plate is mounted in M8 bolts on the rear side of the enclosure. All sides higher than 1000 mm come with rounded edges. Depth rails enable continuous adjustment.
 - Flange opening: Easy cable entry is ensured by placing flange far back in the enclosure
 - Surface: powder-structure coating, grey RAL 7035
 - Degree of protection: Meets IP66 and NEMA 4, 12 and 13 single door, 2 casement models meet IP 55
 - Included in delivery: Complete enclosure with 2 door mounting profiles (from size WSM5050210), mounting plate inc. fixing materials, blank flange with gaskets and screws. Nylon washers for sealing wall-fastening holes.

WIDTH SECTION FOR PLINTH

ASSOB

SCHRACK-INFO

- Width sections for standard bases
- Allows cable to be installed between enclosure rows free of obstruction. Meets VDE 0133 standard, secured through use of 4 corner pieces
- The width sections have no actual bearing function. Instead they keep cables from sight, even though their double-bevelled construction means they are very rigid.
- The corner parts are equipped with plastic covers which offer external access to mounting screws
- 200 mm height models have a simple plate for the front, a split plate for the rear - Cables can be managed from the rear by omitting a half
- Material: Corner sections 2.5 mm galvanized steel, closed at ends, base plates 2 mm steel, powder-coated according to RAL 7022
- Each package contains: 4x corner sections, 2x width sections incl. fixing material

/// MULTI COMBINATION OF FUNCTIONAL AREAS AND BUSBAR ACCORDING TO IEC/EN 60439

/// SCHRACK-INFO

Product Features:

- IEC/EN 60439-1 type-tested assembly
- TTA, PTTA, form 2b to form 4b
- TTCalc software for easy configuration, partlist and all projections plans
- Fully type-tested assemblies (TTA)

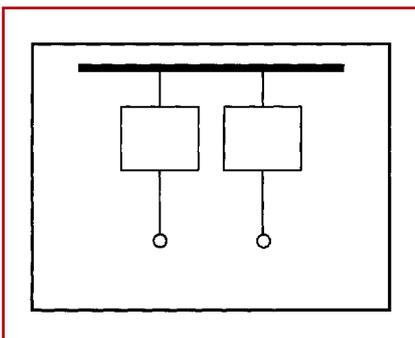

/// MODUL 4000 TT AVAILABLE IN FORM 1, 2B OR 4B ONCE TYPE TESTED IEC/EN 60439-1

This system enables a high density by 38 x 50 mm fixed modules per one selection. Partlist automatically calculate by SCHRACK TTCALC.

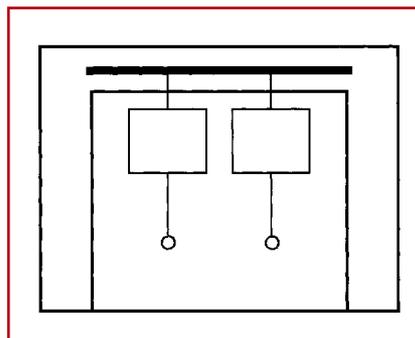

FORM 1

No partition.

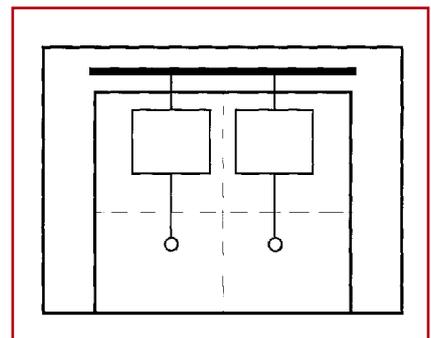

FORM 2b

Separation of busbar from functional unit.
Partition between busbar and unit.

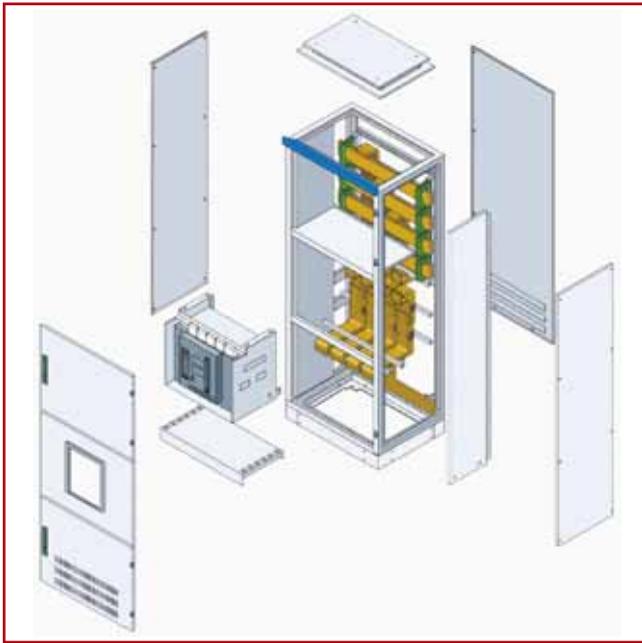

FORM 4b

Separation of busbar from functional unit.
Separation of functional unit from another.
Separation of terminals associated with functional and other units.

MODUL 4000 TT PHILOSOPHY – SCHRACK COMPONENTS WILL BE COMBINED TO FORM ONE TECHNICAL AND ECONOMIC UNIT

- Clear and symmetrical construction with one circuit breaker per section reduces the variety of busbars and the assembly time
- Partitions up to form 4 increase protection of persons and boards
- Functionally packed in elements and delivered as flat pack
- High flexibility in the power connection through three alternatives: Cable connection, cable lugs or busbar trunking connectors

DECLARATION OF CONFORMITY FOR THE MODUL 4000 TT MODULE SYSTEM

- MODUL 4000 TT has passed the type tests TTA acc. to IEC/EN 60439-1
- SCHRACK confirms this to the panel builder with the declaration of conformity for the MODUL 4000 TT module system

TPN DISTRIBUTION BOARDS

ILDB0600FM

SCHRACK-INFO

- Available in 4, 6, 8, 12, 16, 18 and 24 TPN ways
- Reversible door. Can be mounted to open from left to right or vice – a – verse
- Enclosures have an ingress protection rating of IP 40 and comply with BS EN 60439-3
- Additional bolt-on extension box and incoming spreader box
- Busbar system rated to 200A
- One piece copper busbar to eliminate potential hot spots
- Shrouded busbar for increased safety
- Neutral & Earth terminals provided on both sides
- Compact pan assembly providing generous wiring space
- Removable pan assemblies with key hole fixings to easy installation
- Easy fit, DIN-rail mounting, incoming and outgoing devices simply slot into place
- Combination incomer possible. TP main switch, four pole RCD and MCCB c/w Spreader box
- Heavy gauge removable gland plates are provided at the top and bottom with knockouts
- Generous cabling space
- Flush mounting and surface mounting options available

TECHNICAL DATA

- Applicable Standard: BS EN 60439-3
- Number of TPN ways: 4, 6, 8, 12, 16, 18 and 24
- Busbar Nominal Rating: 200 A
- Rated Voltage: 415V AC, 50/60 Hz
- Maximum Incomer Rating: 200 A
- Maximum Outgoing Device: SP/TP-125 A SP/TP
63 A (only in extensionbox)
- Incomer Devices: 3P/4P Isolator, 4P RCD, 3P/4P MCB or TP Isolator + 4P RCD, 200 A MCCB
- Outgoing Devices: SP and TP MCB, RCBo's

MCB – BM SERIES BMS0 4,5 kA

BMS0 4,5 kA

SCHRACK-INFO

- Rated voltage/frequency: 230 V/400 V AC 50/60 Hz, 240 V/415 V AC 50/60 Hz ME version
- Rated breaking capacity: 4.5 kA according to IEC/EN 60 898
- Rated breaking capacity DC: max 48 V one pole
- Tripping characteristics: B, C according to EN 60 898
- Back up fuse: 80 A gG max (>45 kA)
- Tripping temperature: -5 deg C to +40 deg C
- Operation temperature: -40 deg C to +75 deg C
- Ambient temperature: +50 deg C for ME-type
- Selectivity class: 3
- Degree of protection: IP20
- Endurance: > 8000 Operating cycles
- Window with contact position indicator (Red/Green for each pole)
- Terminal capacity: 1 mm² - 25 mm² (except 1P+N)
- Additional connection capability for busbar block system
- DIN rail mounting (EN 50 022)
- Finger and hand touch safe according to BVG A3/OVE-EN 6

- Rated voltage/frequency: 230 V/400 V AC 50/60 Hz
- Rated breaking capacity: 10 kA according to IEC/EN 60 898, 15 kA according to IEC/EN 60 947-2
- Rated breaking capacity DC: max 48 V one pole
- Tripping characteristics: B, C, D according to EN 60 898
- Back up fuse: 100 A gG max (>10 kA)
- Tripping temperature: -5 deg C to +40 deg C
- Operation temperature: -40 deg C to +75 deg C
- Ambient temperature: +50 deg C for ME-type
- Selectivity class: 3
- Degree of protection: IP20
- Endurance: > 8000 Operating cycles
- Window with contact position indicator (Red/Green for each pole)
- Terminal capacity: 1 mm² - 25 mm² (except 1P+N)
- Additional connection capability for busbar block system
- DIN rail mounting (EN 50 022)
- Finger and hand touch safe according to BVG A3/OVE-EN 6

- Rated tripping current: 30 mA, 300 mA (others on request)
- Tripping time: non-delayed, type S min. 40 ms delay
- Sensitivity: AC ~ and pulsating DC
- Rated short-circuit strength: same as BM-Series MCBs
- Back-up fuse for overload and short-circuit protection: by BM-Series MCBs
- Service life: same as Miniature Circuit Breakers series BM
- Prevents nuisance tripping caused by switching Electronic Light Devices (ELD)
- Ambient operating temperature: -25° C to +40° C
- Endurance: same as BM Series MCBs
- Terminals: 2/4-pole, lift terminals on both sides, 1-25 mm² cross-section finger/handtouch safe according to VBG 4, ÖVE-EN 6
- For subsequent mounting onto all BM-Series MCBs
- RCD blocks to be connected to MCBs with a maximum rated current of 40 A are mechanically interlocked against MCBs with a rated current of > 40 A.

SMALL CONNECT RAIL SET FOR MINIATURE CIRCUIT BREAKERS 1+N, 1SU, 10 mm²

BS990170

BS990171

SCHRACK INFO

Set contains 1 pcs. 1-meter rail 10mm² grey, 1 pcs. 1 meter rail 10 mm² blue, 3 (version 1-pole+N) or 9 (3-pole+N version) flexible 10mm² wires black ultrasonically-consolidated ends and 3 in blue. The ultra-sonically-consolidated ends of the wires have exactly the same fit which allows them to fit in the terminal of SCHRACK MCBs BM0 1+N with 1 space unit. Compared to a fixed adapter, they offer the advantage that they can be flexible from the side and from the supply device. Set packed in a polybag.

EXTREMELY COMPATIBLE RAIL FOR MINIATURE CIRCUIT BREAKERS TYPE SI-E 1+N WITH 1 SU

By using 1+N miniature circuit breakers in a pure single-module configuration helps you make the most of limited space with the same levels of safety. For example, when retrofitting during renovation. Small Connect rails are especially useful for these kinds of applications thanks to its especially compact design.

FLEXIBLE CONNECTION WIRES WITH ULTRASONICALLY-CONSOLIDATED ENDS

These offer the great advantage that they can fit in all terminals irrespective of whether the rail is attached above or below the miniature circuit breaker. Also independent of the switch producing the supply current.

COMPLETE SETS OFFER EASE OF USE

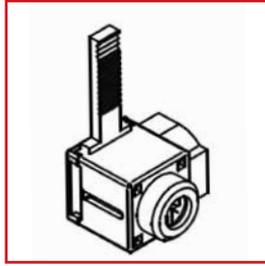

These Small Connect rail sets for 1-pole + Neutral and 3-pole + Neutral conductor applications have the advantage that always receiving the right connection cable for the rail.

AUTOMATIC SWITCHING UNIT, TYPE FSA

BD900907

SCHRACK-INFO

For unmanned switching stations, weekend houses and breakdown-critical industrial plants (e.g. cooling + heating) For quick, but interrupted re-supply of industrial current circuits, for the reliable availability of electric power supply even in extreme situations and in which accidental releases cannot be ruled out As interface for in-house process control technique and Bus installations.

TECHNICAL DATA

- Mechanical device with motor drive and gear with electronic controls for the automatic restarting of (safety) switches RCCB Series BS to 63 A, MCB, MP, A Series to 63 A with simplified functions for the remote switching devices FSE
- Additional mechanical blocking with blocking lever that can be sealed with lead
- Display to show ready-for-operation condition (steady burning green LED)
- Alarm display (red LED)
- Fixed automatic 5-time restarting
- Staggered restarting periods
- Alarm contact operation on A1/A2 using pulse contact for release and permanent contact after the 5th try for switching on (approx. 72 min)
- Selector switch OFF/Reset Autom 5x
- No interruption in function if the supply voltage is stopped
- Rated operating voltage U1/U2: 230 -250 V AC
- Relay output for alarm A1/A2: 5A, 250 V AC
- Permissible ambient conditions: Indoor assembly, European normal climates
- Ambient operating temperature: -25° C to +40° C
- Mechanical/electrical life: 20,000 On/Off switchings
- Typical/maximum restarting periods: instant/10s ; 10/20 s ; 60/70 s ; 10/10 min ; 1/1 h
- Switching delay period from the command: 40s after switching on the operating voltage
- Minimum distance for switching commands: 20s
- Max. current consumption: 2 A AC
- Own consumption: 5 W

Mechanical

- Switching capacity up to max. RCCB/63/4 or MCB 63/4
- Terminals 2x1,5 mm² or 1x2,5 mm²
- Terminal torques: 0.4 Nm

CAUTION!

MAIN LOAD-BREAK SWITCH (ISOLATOR)

MAIN LOAD-BREAK SWITCH

SCHRACK-INFO

- Design meets IEC/EN 60947-3
- Load-break switch for continuous running
- Can be used as a main switch w/ isolating function
- Can come lead-sealed with locking option and accessories
- Can be used to switch motors & highly-inductive loads
- Rated voltage: 240/415 V, 50/60 Hz
- Max. permitted back-up fuse: 125 A
- High rated-isolation voltage: $U_i = 690$ V
- Thermic rated current: $I_{th} = 40/63/80/100/125$ A

SCHRACK COMMUNICATION CENTER II

BZ990000

SCHRACK-INFO

- Easily configured from your Internet browser - does not require any additional software
- Remotely configurable via a GSM modem using PPP
- Network connection and serial interface
- Low power consumption through low power support
- Monitoring via 2 analogue Pt100 and 6 digital inputs
- Ideal for remote monitoring of UR5 monitoring relay
- Controls 7 digital outputs
- Alarms sent via email and SMS
- Compact enclosure for top-hat mounting
- Supply voltage 12-24 V-DC
- Transposed network cable (for direct connection with PC included)
- Integrated Antenna

HEATING SYSTEMS, SHUTTERS, UPS'S, ALARM SYSTEMS

The SCHRACK Communication Center is your ideal partner for the remote monitoring and control of any system. Use the digital inputs to retrieve data directly from your system's auxillary- and signal contacts (RCCB- or combined RCCB/MCB devices). You need to monitor voltages, currents, phase failures, etc? Then order the SCHRACK Communication Center with monitoring relays from or ZR5 series.

Up to 8 persons can be notified by email or SMS should any of the measured values stray from the standard range. All messages of course come in easy-to-follow plain text (pre-defined by customers) with an overview of all current values! Customers can also call up the status of the system at any time via SMS. Should technicians need to interven directly in the system, they can switch on and off the 6 digital outputs of the SCHRACK Communication Center via SMS.

And what happens if a parameter or telephone number changes? Easy! All you need is nothing more than a laptop or PDA with a standard web browser and of course your mobile. You do not even need to visit the SCHRACK Communication Center. Without any fuss, you can simply dial into the device from your workstation and enter the new parameters on the SCHRACK Communication Center webpage.

POSSIBLE ACCESSORIES

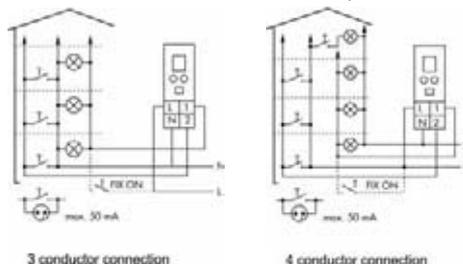

- Auxillary contacts for motor protection-, RCCB-, and combined RCCB/MCB devices
- BR900003 remote trip for BR series MCBs

TIMERS FOR STAIRCASE LIGHTING, VOWA

BZ327350

FUNCTIONS

Electronic staircase lighting timer with switch-off warning. The control input allows the connection of pushbuttons with a total glow lamp load up to 100mA and enables the application in 3-or 4-wire circuits. The unit can be retriggered via the connected pushbuttons. A long keypress will switch off the light (energy saving function). A fast sequence of pushes (pumping) will extend the period to a multiple of the selected value. Depending upon distinct type, the following operating methods can be selected by the controls on the unit:

- TW – Automatic timer with switch-off warning
- T – Automatic timer without switch-off warning
- 1 – Steady light (ON)
- 0 – Switch-off
- P – Impulse switch mode without time function (only for BZ327360)
- PN – Impulse switch mode power fail latch (only for BZ327360)

10. Functions

Function automatic timer (T, TW)

After the pushbutton at B1 has been pressed, the output relay R closes (terminals L-18) and the set interval t begins. If the pushbutton is pressed again before the interval t has expired, the interval begins again (restart function complies with EN 60669-2-3). Rapid, multiple pressing of the pushbutton (pumping) adds 2, 3 or more time intervals to extend the time up to 60 min. Prolonged pressure on the button (>2s) aborts the interval running and switches the relay off (energy saving function). In the TW mode the device provides a switch-off warning (in accordance with DIN 180-158-2) by generating short pulses (fl ashing) at 30 s, 15 s and 5 s prior to switch-off.

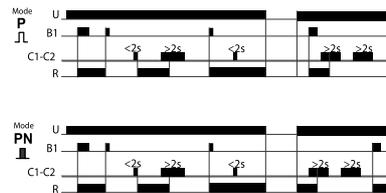

Operating possibilities at B1 in mode T and TW:

The additional control input C1-C2 can be used in the T and TW modes to control the staircase lighting timer with a voltage of 8 to 230 V AC/DC. This input can be used to start and restart the cycle. It cannot be used for switchoff (energy saving function) or for programming long intervals (pumping).

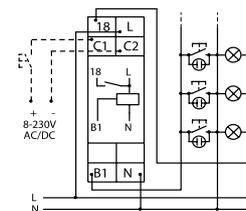

Impulse switch mode (P), (PN):

In this mode, every keypress toggles the output relay R (fl ip-fl op). In function P, the output relay R remains in off-position, whenever the supply voltage is applied. In function PN, the output relay R switches into on-position after applying the supply voltage U, if the output relay R was in on-position last before power failure. The output relay R switches into on-position, if a short voltage impulse (<2s) is applied to the additional control input (C1-C2). (central ON) A longer voltage impulse (>2s) opens the output relay R. (central OFF)

TIMER RELAY, ZR5 – GENERAL INFORMATIONS – continued

9. Function

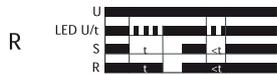

ON delay (E)

When the supply voltage U is applied, the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay R switches into on-position (yellow LED illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the expiry of the interval t , the interval already expired is erased and is restarted when the supply voltage is next applied.

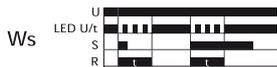

OFF delay (R)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (yellow LED illuminated). If the control contact is opened, the set interval t begins (green LED flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). If the control contact is closed again before the interval t has expired, the interval already expired is erased and is restarted.

Single shot leading edge with control input (Ws)

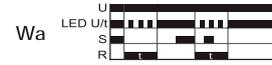

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (green LED U/t illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

Single shot trailing edge with control input (Wa)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). Closing the control contact S has no influence on the condition of the output R . When the control contact is opened, the output relay switches into on-position (yellow LED illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated), the output relay switches into off-position (yellow LED not illuminated).

During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

ON delay with control input (Es)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay R switches into on-position (yellow LED illuminated). This status remains until the control contact is opened again. If the control contact is opened before the interval t has expired, the interval already expired is erased and is restarted with the next cycle.

Single shot leading edge voltage controlled (Wu)

When the supply voltage U is applied, the output relay R switches into on-position (yellow LED illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the interval t has expired, the output relay switches into off-position. The interval already is erased and is restarted when the supply voltage is next applied.

Flasher pause first (Bp)

When the supply voltage U is applied, the set interval t begins (green LED U/t flashes). After the interval t has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t begins again. After the interval t has expired, the output relay switches into off-position (yellow LED not illuminated). The output relay is triggered at a ratio of 1:1 until the supply voltage is interrupted.

FUNCTION

1. Functions

The function has to be set before connecting the relay to the supply voltage.

- lp Asymmetric flasher pause first
- li Asymmetric flasher pulse first
- ER ON delay and OFF delay with control contact
- EWu ON delay single shot leading edge voltage controlled
- EWs ON delay single shot leading edge with control contact
- WsWa Single shot leading and single shot trailing edge with control contact
- Wt Pulse sequence monitoring

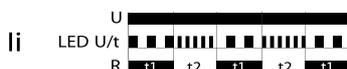

Asymmetric flasher pause first (lp)

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

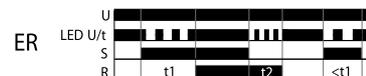

Asymmetric flasher pulse first (li)

When the supply voltage U is applied, the output relay R switches into on-position (yellow LED illuminated) and the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay switches into off-position (yellow LED not illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into on-position (yellow LED illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

ON delay and OFF delay with control contact (ER)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated). If the control contact is opened, the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). If the control contact is opened before the interval t1 has expired, the interval already expired is erased and is restarted with the next cycle.

ON delay and single shot leading edge voltage controlled (EWu)

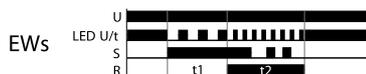

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). If the supply voltage is interrupted before the interval t1+t2 has expired, the interval already expired is erased and is restarted when the supply voltage is next applied.

SERVICE RELAY ZR5B0025 – continued

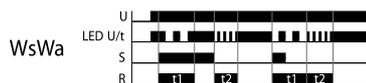

ON delay and single shot leading edge with control contact (EWs)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

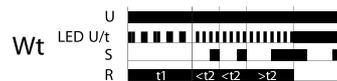

Single shot leading and single shot trailing edge with control contact (WsWa)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (yellow LED illuminated) and the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into off-position (yellow LED not illuminated). If the control contact is opened, the output relay again switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times.

Pulse sequence monitoring (Wt)

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly) and the output relay R switches into on-position (yellow LED illuminated) After the interval t1 has expired, the set interval t2 begins (green LED U/t flashes fast). So that the output relay R remains in on-position, the control contact S must be closed and opened again within the set interval t2. If this does not happen, the output relay R switches into off-position (yellow LED not illuminated) and all further pulses at the control contact are ignored. To restart the function the supply voltage must be interrupted and reapplied.

- Voltage monitoring in 3-phase mains
- Undervoltage monitoring
- ON delay 5...15 min.
- Supply voltage = measuring voltage
- 1 change over contact
- Width 17.5 mm
- Installation design

1. Functions

Undervoltage monitoring for 3-phase mains with fixed threshold voltage and fixed hysteresis. All measuring inputs (L1, L2 and L3) must be connected to phase voltage. If single or 2-phase monitoring is required, unused input terminals (L) must be connected to mains voltage to have proper L-N voltage on the terminals L1, L2 and L3. If there is a reverse voltage on account of a consumer, which exceeds the fixed threshold, detection of phase failure isn't possible.

Undervoltage monitoring with ON delay (Option E)
 When the voltage of all connected phases exceeds the fixed threshold by more than the fixed hysteresis, the set interval t begins (green LED U/t flashes). After the set interval t has expired, the output relay R switches into on-position (yellow LED R illuminated, green LED U/t illuminated). When the voltage of one of the connected phases falls below the fixed threshold, the output relay R switches into off-position (yellow LED R not illuminated, green LED U/t not illuminated).

- Optional evaluation of one thermal contact
- Test function with integrated reset key
- Rated isolated voltage on the sensor circuit up to 690V
- 1 change over contact

TECHNICAL DATA

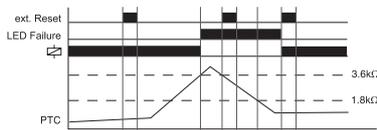

1. Functions

Temperature monitoring of the motor winding (max. 6 PTC) with fault latch for temperature sensors in accordance with DIN 44081, short circuit monitoring of the thermistor line (selectable by means of terminals), integrated test/reset key.

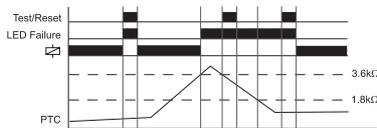

THERMISTOR MONITORING RELAY UR5R1021 – continued

Temperature monitoring of the motor winding with fault latch. If the supply voltage U is applied (green LED illuminated) and the cumulative resistance of the PTC-circuit is less than 3.6kΩ (standard temperature of the motor), the output relay switches into on-position. Pressing the test/reset key under this conditions forces the output relay to switch into off-position. It remains in state as long as the test/reset key is pressed and thus the switching function can be checked in case of fault. The test function is not effective by using an external reset key. When the cumulative resistance of the PTC-circuit exceeds 3.6kΩ (at least one of the PTCs has reached the cut-off temperature), the output relay switches into off-position (red LED illuminated). The output relay switches into on-position again (red LED not illuminated), if the cumulative resistance drops below 1.65kΩ by cooling down of the PTC and either a reset key (internal or external) was pressed or the supply voltage was disconnected and re-applied.

TECHNICAL DATA

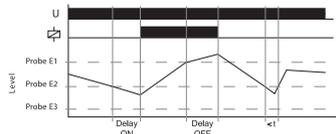

1. Functions

Level monitoring of conductive liquid, timing for tripping delay and turn-off delay separately adjustable and the following functions (selectable by means of rotary switch):

Pump up pump up or minimum monitoring
 Pump down pump down or maximum monitoring

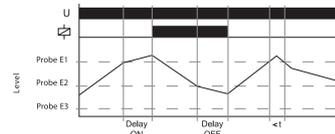

Pump up

Connection of the probe rods E1, E2 and E3. Alternatively the electrically conducting container can be connected in lieu of the test probe E3. When the air-fluid level falls below the minimum probe E2 the set interval of tripping delay (Delay ON) begins. After the expiration of the interval, the output relays R switches into on-position (yellow LED illuminated). When the air-fluid level again rises above the maximum probe E1, the set interval of turn-off delay (Delay OFF) begins. After the expiration of the interval the output relays R switches into off-position (yellow LED not illuminated).

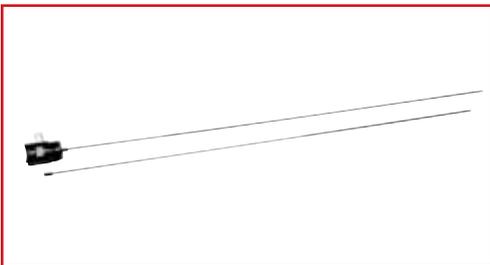

Pump down

Connection of the probe rods E1, E2 and E3. Alternatively the electrically conducting container can be connected in lieu of the test probe E3. When the maximum probe E1 gets moistened the set interval of tripping delay (Delay ON) begins. After the expiration of the interval the output relays R switches into on-position (yellow LED illuminated). When the air-fluid level falls below the minimum probe E2, the set interval of turn-off delay (Delay OFF) begins. After the expiration of the interval, the output relays R switches into off-position (yellow LED not illuminated).

SCHRACK INFO

- Voltage monitoring in 3-phase mains
- Monitoring of phase sequence, phase failure, asymmetrie

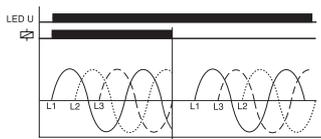

TECHNICAL DATA

1. Functions

Monitoring of phase sequence, phase failure and asymmetry with adjustable asymmetrie, connection of neutral wire optional.

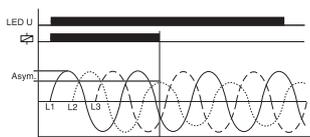

Phase sequence monitoring

When all the phases are connected in the correct sequence and the measured asymmetry is less than the fixed value, the output relay switches into on-position (yellow LED illuminated). When the phase sequence changes, the output relay switches into off-position (yellow LED not illuminated).

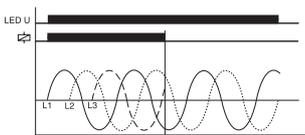

Asymmetry monitoring

The output relay R switches into off-position (yellow LED not illuminated) when the asymmetrie exceeds the value set at the ASYM-regulator. Reverse voltages of a consumer (e.g. a motor which continues to run on two phases only) do not effect the disconnection.

Phase failure monitoring

The output relay switches into off-position (yellow LED not illuminated), when one of the three phases fails.

■ SURGE ARRESTERS

■ WHEN CHOOSING A SURGE ARRESTER

Consider the detailed requirements in the following diagram and then select the appropriate switch type and surge arrester in the next section as appropriate to the mains system and protective action required.

■ GENERAL INFORMATION – SPD TERMINOLOGY

- Surge Protection Device (SPD): device for limiting over-voltages.
- Maximum Continuous Operating Voltage (U_c): the maximum voltage which may be connected to the SPD (sometimes referred to as its "rated voltage").
- Voltage Protective Level (U_p): the limiting voltage which appears across the terminals of an SPD under conduction of a surge of defined waveshape and amplitude. If no such waveshape or amplitude is defined, U is assumed to be stated when the SPD is subjected to the nominal discharge current I .
- Impulse Current (I_{imp}): peak value of current having a wave shape of 10/350 s. It is used in the classification of SPDs to test class I, for direct strike lightning discharges.
- Nominal Discharge Current (I_n): used in the classification of SPDs to test Class II. It shows the SPDs ability to withstand 15 impulses of peak magnitude I_n with an 8/20 swaveshape.
- Environmental Protective Rating (IP): the protective rating of the SPD enclosure against the environment e.g. water, dust etc.
- Disconnecter: a device, internal or external to the SPD, which is used to provide safe disconnection under fault conditions. Disconnecters may provide isolation by operating as thermal devices, or over current devices.
- Following Current (I_f): generally applies to voltage-switching type SPDs. This is the current delivered by the power distribution system which can be safely extinguished by the SPD during operation.

PROTEC 25 kA (10/350), CLASS I + II (LPL I + II)

IS211330

SCHRACK-INFO

The Schrack-Protec series has been developed to protect against partial direct and indirect discharges. It is intended to provide lightning protection level I and II (protection zone 0A to 1) according to IEC62305.

This series is tested for testclass I and testclass II according to IEC61643-1 with a maximum impulse current (Iimp) of 25kA (10/350) per pole and nominal discharge current (In) of 40kA (8/20) per pole. The devices are available for maximum continuous current operating voltage (Uc) of 275Vac.

Surge arrester class B/C, Class I/II, Type of design 1/2, meets EN/IEC-SN 60, part 4, and EN/IEC 61643.

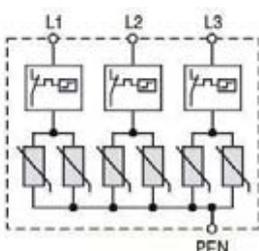

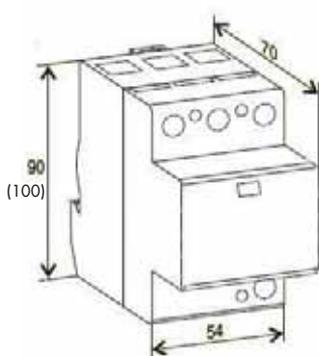

INSTALLATION REQUIREMENTS

National regulations for installation must be followed!

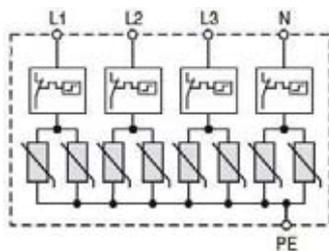

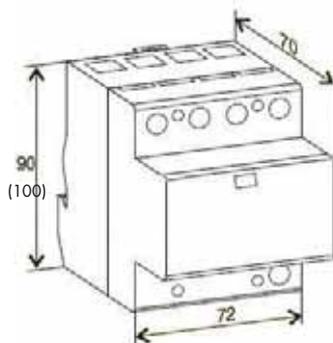

In Austria: EN/IEC 8001-1, EN/IEC E 8049, EN/IEC 62305 or IEC 60364-5-53 A1.

RANGE OF APPLICATION

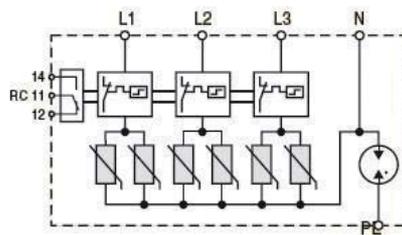

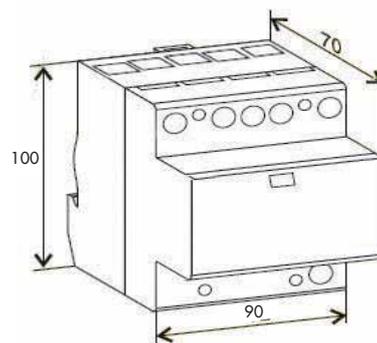

Varistor-lightning arresters/surge arresters designed for indoor mounting as a means of protecting consumer appliances against lightning and transient voltage surges. Can be used for construction systems with I and II classes of protection in accordance with EN/IEC E 8049 (EN/IEC 62305). The surge arrester operates in any position. The application of varistor technology extinguishes mains follow currents. It also ensures that connected devices are stress free and also offers a lower protection set off. No additional gas-filled blow-out spark gaps are required.

SCHRACK-INFO

The Schrack-Combttec series has been developed to protect against partial direct and indirect discharges. It is intended to provide lightning protection level III and IV (protection zone 0A to 1) according to IEC62305.

This series is tested for testclass I and testclass II according to IEC61643-1 with a maximum impulse current (Iimp) of 12,5kA (10/350) per pole and nominal discharge current (In) of 20kA (8/20) per pole. The devices are available for maximum continuous current operating voltage (Uc) of 275Vac and 335Vac.

For each path: Class B/C, type of design I/II, type 1/2, EN/IEC-SN 60, part 4, / EN/IEC 61643 approved.

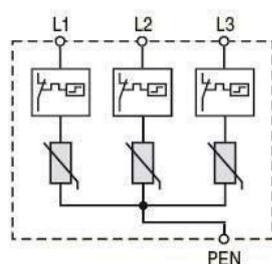

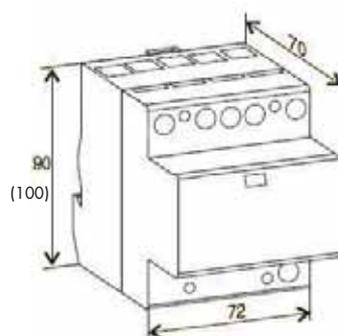

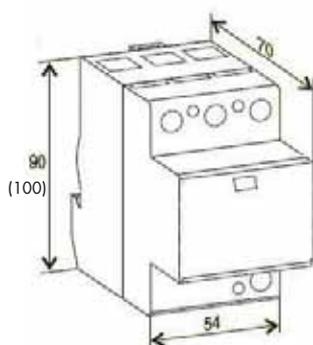

INSTALLATION REQUIREMENTS

National regulations for installation must be followed!

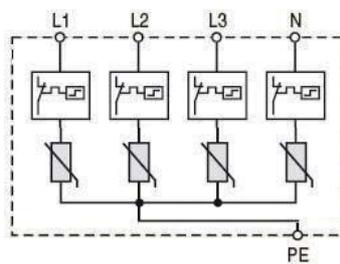

In Austria: EN/IEC 8001-1, EN/IEC E 8049, EN/IEC 62305 or IEC 60364-5-53 A1.

RANGE OF APPLICATION

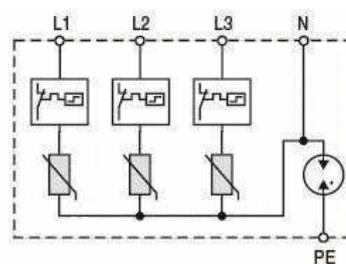

Combined lightning arresters/surge arresters designed for indoor mounting as a means of protecting consumer appliances against lightning and transient surge voltages. Are ideally used for construction systems having protection class III and (IV) according to ÖVE/ÖNORM E 8049. Surge arrester operates in all locations. Coupling VV-SG50-VS surge arresters provide a low protection level in a variety of network systems (TT/IT/TN-C/TN-C-S) with the width of an RCCB of only 4 MW (3+1 switching operation 6 MW) without any mains follow currents.

■ PRODUCT DESCRIPTION:

POWERTEC 25, 60 (R) with a low protection level is a selective, two-level T1 + T2 (B+C) surge arrester, which combines protection classes I+II in a single device. This means no decoupling elements are required for cable lengths under 10 m. Using hermetically sealed spark gaps filled with inert gas means that the requirement of a high discharge capacity is fulfilled while maintaining functional stability. The first level (non-linear resistor type arrester) discharges impact currents (up to 4kA) without causing any mains follow-currents. When a pre-defined impact current (up to 4 kA) has been exceeded, the second level (the hermetically sealed spark gap filled with inert gas) engages for the less common discharge of high-energy transients up to 25 kA / 60 kA (10/350 μ s) which may arise during close-up or direct lightning strikes. As an option, a potential-free relay contact (R) with terminal is included in the enclosure- to aid signalling.

V-wiring can be easily installed using the unlabelled terminal (the one not connected with the L/N terminal in the device) using the optional 2-pole comb-type rail.

RANGE OF APPLICATION

SG50 used in combination with COMBTEC VV, VS, G100 in combination with PROTEC, POWERTEC in 3 + 1 switching operation is used to protect against direct lightning strikes in external overhead lines or external lightning arrester in the TT system. See graphic for application.

PRODUCT DESCRIPTION:

SG 50, G 100 are 1-pole N/PE lightning arresters with protection class I+II+III (B+C+D) for protection against partial lightning currents from entering electrical installations. The device is used for equipotential bonding of lightning protection in the 400/230 VAC TT system, as a N/PE conductor with 3 + 1 switching operation.

It is able to deflect lightning currents up to 50 kA / 100 kA (10/350 μ s) with a charge of 50 As, and has a low protection level, $U_p < 1,5$ kV.

The use of a hermetically-sealed high-performance spark-gap filled with inert gas makes use of a dangerous blow-out opening superfluous.

INSTALLATION- AND OPERATING NOTES:

A gap need no longer be enforced between neighbouring cables and components to prevent arcing faults. Given that this arrester is required to deflect high lightning currents, we recommend the use of single-wire Cu conductors upwards of 16 mm². The entire length of the connection must not exceed 0.5 m. If this cannot be ensured, install the PE conductor with an extra terminal V-formed where possible.

SURGE ARRESTERS, CLASS I (B)

■ N/PE LIGHTNING ARRESTER, 50 kA / 100 kA (10/350) μ S, SG50, G100 – continued

■ CAUTION:

The SG 50, G 100 must only be installed by specialist electricians. All valid norms must be observed during mounting and installation. This device must only be used as a N/PE aggregate-lightning arrester in the 3+1 switching operation, appropriate to the lightning protection class.

■ FAULT DETECTION

When required, this arrester can also be tested using an insulation meter. When Risol 0.5 to 1 M Ω , the arrester must be replaced at the next opportunity, when Risol < 0.5 M Ω it must be replaced immediately.

TIPS & TRICKS

Observe the respective national regulation for installation! E.g. ÖVE 8001-1 or IEC 60361-5-53 A1. The neutral contactor does not require a surge protection device (in accordance with the TN-C switching arrangement) if the protective multiple earthing connection is set up where the surge protection device is integrated.

The connection line to the equipotential bonding rail or PE rail should be as short as possible and without looping. All surge devices must be unplugged during insulation measurement.

The VVP335 surge arrester has been designed for mains voltages of 3~400/230 V in accordance with ÖVE 8001-1. According to IEC 603645-5-53 A1, the VVP255 surge arrester is for export only.

RANGE OF APPLICATION

Plug-in surge arresters designed for indoor mounting as a means of protecting consumer appliances against lightning and transient voltage surges. The surge arrester operates in any position. Terminal assignment for the mains and PE/PEN-conductor is freely definable.

¹⁾ ÖVE design according to ÖVE 8001-1, section 18. Must be implemented by law in Austria.

²⁾ As specified in ÖNORM/ÖVE E8001-1, the 20kA requirement still applies to the surge arrester between Neutral and the main earthing rail (N/PE conductor). (PAS) or PE-rail, even in cases where surge protection devices were installed with greater nominal discharge currents, e.g. 15 kA or 20 kA between the external conductors and the Neutral conductor.

TECHNICAL DATA

For the equipping of new and retrofitting of existing earthed sockets. Can be integrated in flush-mounted enclosure boxes. Through-wiring model enables other plug sockets to be connected.

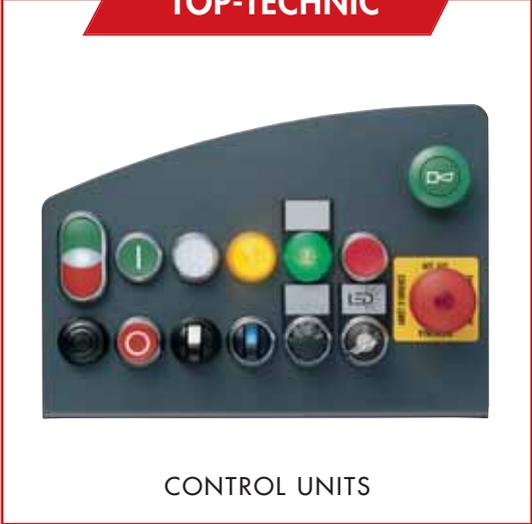

RANGE OF APPLICATION

The protective device is primarily designed for fusing sensitive electronic devices mains-side, and is suitable for universal application in flush-mounted modular device- and enclosure sockets. This device allows you to equip already existing flush-mounted plug sockets with surge protection. The protective device is clamped into a FM- device insert using a spring clip after the L, N and PE conductors are connected to the plug socket- on the device side. Afterwards, the plug socket is mounted as usual.

This enables the user not only to equip plug sockets to be installed for the first time but also to retrofit existing plug sockets, regardless of individual models of different manufacturers. The switching operation of the device provides parallel protection. This ensures that supply to the protected device- mains-side is maintained even if the protective device is damaged. Fault indication is provided by a sensor integrated in the device. This indicates when protection is no longer provided, in which case the protective device should be replaced by an electrician as soon as possible.

MULTI CHIP LED

Several LED chips are integrated in the surface of the lamp. Through multichip LED technology, we can offer an even, colour-intensive light distribution, which is easy to see even in bright conditions. Not to mention the well-known long service life of LEDs.

LOAD-BREAK SWITCHES & CAM SWITCHES – GENERAL INFORMATIONS

MAIN-, LOAD-BREAK-, CAM- SWITCHES

MAIN SWITCHES AND MAIN SWITCHES WITH EMERGENCY STOP

In accordance with the standards IEC/EN 60204/ VDE0113, all production machines and machine tool must be equipped with a main switch, which disconnects all electrical equipment from all active mains connections during cleaning, maintenance and repair work and during longer downtimes.

Where 2 or more main switches are required, suitable protective interlocking devices must be used. However, we recommend the use of a 4 pole main switch (cam switch).

The main switch must be of one of the following types:

- Load-break switch which meets IEC/EN 60947-3 and VDE 0660 part 107 for application categories AC23-B or DC-23B.
- Disconnecter with auxillary contact (e.g. A3-10 switching program), which ensures at all times that the switch devices can break the load before the main contacts of the disconnecter are opened.
- The breaking capacity must be break at the same time the current of the largest motor at stall, together with the sum of the currents of all other motors and/or load circuits.

LT LOAD-BREAK SWITCH.. 20 – 160 A

Load-break switches can be used anywhere where compact ON-OFF switches with large contact gaps (isolators) and a high contact pressure, and where a greater short circuit protection is required. They are thus used as main switches in accordance with IEC/EN 60204/ VDE 0113 incl. locking device, terminal cover and forced-switching contactors.

Disconnectors according to IEC/EN 60947-3 & VDE 0660 part 107 with switching-position-indicators for 690 V.

3-pole or 4-pole motor switch. In accordance with IEC/EN 60947-3 / VDE 0660 part 107, these LT range switches have a high AC3 & AC23A switching capacity.

CAM SWITCHES, 10 – 250 A

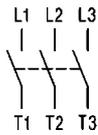

Cam switches can be used for practically any purpose, as motor switches, main switches, control switches or instrument switches for example. Alongside the list of switching programs, a practically endless list of special switching programmes can also be used.

SCHRACK cam switches are modular, operate with double disconnection per pole and two contacts per switch cell. Using a variety of models, additional devices and various handles and front frames, they can be used in almost endless combinations. The switches of all types are made up of a locating mechanism and a switch kit. The cams are driven by a stabile, torsionally rigid aluminium shaft. The locating mechanism determines the switching angle and the number of positions. Switches of all sizes and designs can in theory also be designed with 90°-, 60°-, 45°- and 30° switching angles.

LT LOAD-BREAK SWITCHES

SCHRACK-INFO

Their ideal performance characteristics enable main switches to be used as main switches, emergency stop-, repair- & safety switches.

4step insulated part	IK020017
Cover for IK 020017, L=1 m	IK020011
Additional terminal for connection up to 25 mm ²	IK020015
Additional steel terminal 25 mm ²	IK020016

POTENTIAL EQUALIZATION RAIL

BS900200

SCHRACK-INFO

- Up to 100 A
- With plastic cover
- 1 earthing tape up to 30 x 3.5 mm
- 1 massive round conductor 7 - 10 mm (protection against lightening)
- Nominal cross-section and starting torque marked on the terminal

CERTIFICATIONS

VDE 0606 art. 7 and art. 8

Insulating body:

- Made from polyamide, standard colour beige (RAL 1001) or special colour blue (RAL 5015)
For using in current circuits (EX)i
 - According to the IEC guideline 947-7
 - Self-extinguishing
 - Fire-proof quality: Degree VO, according to UL94
 - Operating temperature between -30 °C and 110 °C for polyamide; -40 °C and +140 °C for melamine
 - Free of asbestos, PCB and PCT, cadmium, phosphorous and halogen type substances
- Conductive part:
- Components made exclusively from copper/zinc alloys, with high copper content

SCHRACK-INFO

- Optimum cover fit, easy assembly and disassembly
- Cover contour 90°
- Wire restraint catch from the overall height 80 mm
- Breaking points on the fins and on the duct base
- Use of partition possible for 100 mm width
- Bottomside holing according to DIN EN 50085-2-3, punch/stamp block identical for each length, Single-lane up to 60 mm width, three-lane from 80 mm width
- Great variety of accessories
- Fin width 6.5 mm
- Slot width 4.5 mm
- Material: Hard PVC, lead-free, hardly inflammable, self-extinguishing temperature stability up to 60 °C
- Colour: gray, RAL 7030
- Test VDE, UL/CSA, IMQ
- Delivery in 2 m rod SET

WIRING DUCT WITH DIN DIMENSIONS

BE-DIN

SCHRACK-INFO

- Incl. upper parts (can be ordered separately)
- Material: PVC 1309 (tested up to overall height 75 mm according to UL 94 V0, Test No. E167546)
- UL-certified
- Side sealing cover: PVC 1309
- Cable hanging chamber: SB
- Hardly inflammable self-extinguishing according to VDE/UL 94 V0
- Temperature range of -5° C to +60° C
- Colour: RAL 7030 stone gray
- 24 dimensions
- Bottomside holing according to DIN 43659

TECHNICAL DATA

- In increased overall heights wire restrainer is located in the side punching for captive wiring.
- Slight breaking off of the fins due to breaking points on the side walls.
- Safe wiring through both sided tapered side punchings in the upper area prevents the unintended detachment of the locked up cover through inlaid lines.
- Tight fit of the cover for more safety; subsequent unlocking of the cover and re-wiring is always possible.
- A tooth extension is available in the upper area of the tooth for all dimensions, which ensures the safe wire restraint in the duct. Prices in price list and PU are indicated in meters.

CAPACITOR SWITCHING CONTACTORS

LA3K181

SCHRACK-INFO

- For use in detuned or non-detuned capacitor units.
- Technical data according to EN 60 947-4-1; EN 60 947-5-1; VDE 0660

TECHNICAL DATA

Specification: The capacitor switching contactors K3-..K are suitable for switching low-inductive and lowloss capacitors in capacitor banks (IEC 70 & 831, VDE 0560) with and without reactors. Capacitor switching contactors are fitted with early make contacts and damping resistors to reduce the value of the make current to $<70 \times I_e$.

Operating conditions: Capacitor switching contactors are protected against contact welding for a prospective make current of $200 \times I_e$. Fuse rating approx. $1,6$ to $2,5 \times I_e$, type gL gG9.

SOFT STARTERS

MOTOR CONTROLLER

lak32155

RANGE OF APPLICATION

Motor drive:

- Packaging industry
- Printing presses
- Valve control in power stations
- Bell controls

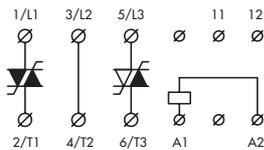

In general:

- Compressor systems
- Machine tools
- Conveyor systems
- Looms
- Fans and ventilation systems
- Woodworking machines

SUPPLEMENTAL TECHNICAL DATA

- Soft starter, three controlled phases
- Soft starter, two controlled phases
- Soft starters with break system
- Initial torque limiting system, 1 or 3 controlled phases

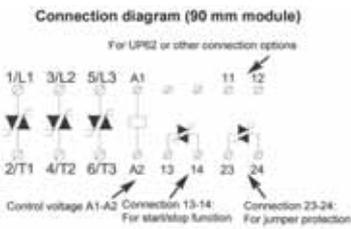

2 controlled phases, LAK

Benefits:

- Easy, rapid mounting
- Immediately ready for use
- Very easy to adjust
- Contact-protected
- More compact than standard soft starters
- Standardized module widths

3 controlled phases, LAT

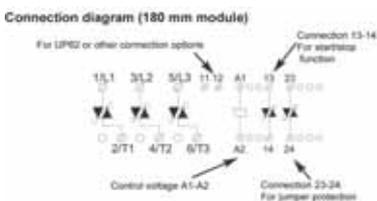

APPLICATIONS

Used to delay the start and stop of 3-phase motors:

- Compressor systems
- Machine tools
- Conveyor systems
- Looms
- Fans and ventilation systems
- Woodworking machines
- Can be used instead of Star/Delta starters
- Packaging industry
- Printing presses

- Unit used to soft start three-phase and single-phase motors with rated operating voltages of 230 to 600 V, 50 or 60 Hz
- Rated operating current up to 25 A AC-3 (11 kW 400 V 3 phases)
- Operating voltage range: 230 to 600 V AC, 50 or 60 Hz
- Adjustable ramp-up time 0.5 s to 5 s
- Initial torque can be set to between 0% - 85% of nominal torque.
- LED operating status indicator
- Degree of protection IP 20
- Compact modular structure, 45 mm installation width on DIN rail
- Genuine contact-free motor contactor for extremely long service life
- Unlimited number of start/stop operations per hour.

SCHRACK-INFO

- Socket comes with solder or PCB terminals
- Plug-in sockets with screw-type terminals
- LED and Protection modules
- With a switching current of 6 A, the 4-pole version offers switch cabinets a power reserve of 20% compared with comparable relays. Its reduced height means space in the switch cabinet can be used more efficiently.
- Can be used universally in automation and control
- 2, 3 or 4 C/O contacts
- Switching performance of up to 3000 VA
- Height 29 mm
- Cadmium-free contact material
- Mechanical and electrical indicator
- Push-to-test button, accidental contact-proof, various lock options
- White label
- RoHS compliant (directive 2002/95/EC)

TIPS & TRICKS

The PT series miniature relay is predominantly used in heating and elevator control systems, machines and process plant engineering.

RANGE OF APPLICATION

Can be used universally in automation and control

ACCESSORIES

- Sockets come with solder or PCB terminals
- Plug-in sockets with screw-type terminals
- LED and Protection modules

PACKAGING

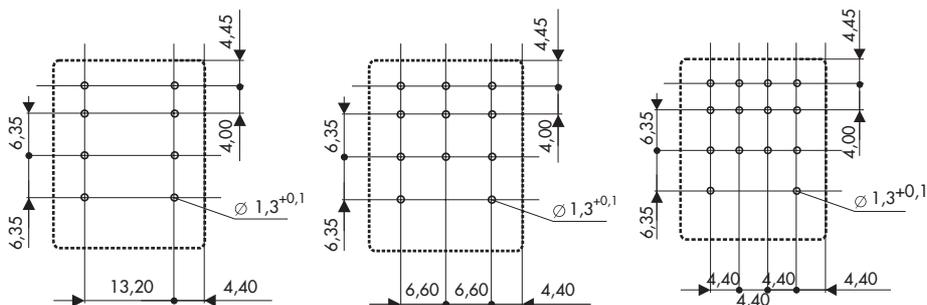

All PT miniature relays come with a new user-friendly cardboard packaging in sets of 10 pieces.

POWER RELAY, TYPE RM, 1-, 2- OR 3-POLE

POWER RELAY RM

SCHRACK-INFO

- 1/2/3-pole, 10/16/25/30 A, DC and AC coils
- For plug-in and PCB terminals
- Mechanical indicator, push-to-test button
- Tab fastening, DIN rail mount
- RoHS compliant (directive 2002/95/EC)
- DC coil:
The pull-in voltage is equal to 0,75 x rated voltage.
The release voltage is equal to 0.1 x rated voltage.
- AC coil:
The pull-in voltage is equal to 0.8 x rated voltage.
The release voltage is equal to 0.4 x rated voltage.

For power relay RM 8:

- 2 C/O contacts
- DC and AC coils
- Mechanical indicator
- Push-to-test button
- Tab fastening or DIN rail mount
- Used in cleaning machinery, heating and refrigeration control systems

For power relay RM C/D:

- 1 N/O or 1 N/O + 1 N/C
- Switching capacity up to 7200 VA
- DC and AC coils
- Push-to-test button
- Tab fastening
- Used in battery chargers, heating control systems

SUPPLEMENTAL TECHNICAL DATA

For power relay RM 5/6:

- 2 N/O or 3 N/O contacts
- 3 mm contact gap
- DC and AC coils
- Push-to-test button
- Tab fastening, DIN rail mount plug-in
- Used in emergency power supplies, pump control systems

TIPS & TRICKS

Used for the direct control of short-circuit rotary motors, hot water storage units and off-peak current ovens. Can be used as switching relay in series devices.

SCHRACK-INFO

- 6 A/1-pole
- Extremely slim: 5 mm
- Cadmium-free contacts
- Sensitive coil 170mW
- 4 kV coil contact, 6/8 mm clearance/creepage
- N/O version available with 8/8 mm clearance/creepage upon request
- Protection class II (VDE 0631)
- High function and packing density
- RoHS compliant (directive 2002/95/EC)

RANGE OF APPLICATION

Central and local heating control systems, extremely narrow coupling devices, interface technology, timer relays, SPSSs, I/O modules.

■ CIRCUIT BREAKERS – OVERVIEW

■ SELECTIVITY

Thanks to the way they are designed, MC circuit breakers have a high level of selectivity which enables you to construct a selective system.

■ OPTIMUM PROTECTION RANGE BETWEEN 0,16 A AND 6300 A

With the MC and MO circuit breaker concept, SCHRACK is now able to combine trusted technology with modern features. These circuit breakers work perfectly together and can communicate with each other. MC and MO circuit breakers have modern communication functions. They provide optimum protection between 0,16 A and 6300 A. MC and MO are part of a generation of circuit breakers whose modularity allows the use in any power distribution application. These circuit breakers are cost competitive providing flexibility for engineering and can also be integrated into higher-level system solutions. MC and MO circuit breakers are manufactured to international standards. Combining intelligent open and compact devices together with communication systems giving many benefits and solutions.

■ CONTINUOUS COVERAGE BETWEEN 0,16 A AND 6300 A

MC and MO cover a rated current range from 0,16 A to 6300 A. With their four classes of switching capacity up to 150 kA, they provide a safe and, at the same time, the most efficient solution – from standard applications to the most demanding of requirements.

■ COMMUNICATION OPENS UP NEW POSSIBILITIES

MC and MO circuit breakers open up new possibilities for power distribution and automation with their communication capability. They record all the important data you need, indicate them locally and can pass this data on to higher level systems. In this way, system transparency is increased and reaction times to critical states such as over-current, phase imbalance or phase failure are reduced. Targeted intervention can help avoid system breakdowns and preventative maintenance can be planned. This enhances system and machine availability, avoiding costly production downtimes.

■ SYSTEMS WITH CIRCUIT BREAKERS – THE BENEFITS

- Circuit breakers offer protection, contacting and disconnection capabilities.
- Contacts always use 3-pole triggering, thus preventing 2-phase motor operation.
- In the event of the circuit breaker being triggered by a fault, the circuit breaker is simply reset once the fault is removed.
- Remote on/off switching including appropriate indications is easy.
- Ageing / replace all three fuses / characteristic curve shift.

■ A COMPACT DESIGN IN 4 FRAME SIZES FOR HIGH-PERFORMANCE APPLICATIONS

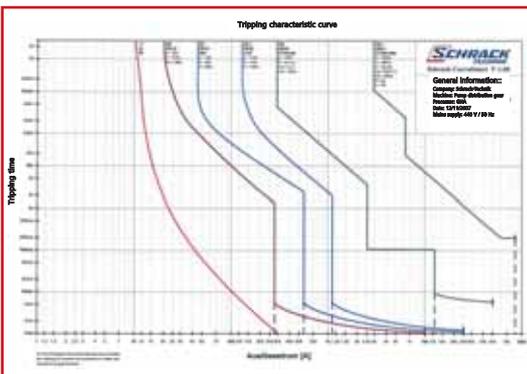

MCCBs - Enclosed compact circuit breakers from 15 to 2.000 A with only four frame sizes. These circuit breakers can be used universally – from the smallest of service distribution boards, to machine controls or motor starter combinations, up to large energy distribution systems with a maximum short-circuit breaking capacity of 150 kA. Special versions are available for smaller power ratings with phase failure sensitivity protection for motor and motor-related applications. The range of CBs is rounded off nicely with switch actuation using toggle-lever, rotary- or remote operators. Shunt-, undervoltage- and earth fault- and residualcurrent releases complete the range. The MCCBs can be used universally for DC applications thanks to their high DC-3 utilization category: ranging from photovoltaics to emergency generator batteries to sophisticated breaking and protection of DC shunt-wound motors in reverse- and jog mode. The new MC-A circuit breakers are the ideal protection devices for DC current networks with operating voltages up to 750 V and operating currents up to 500 A. Featuring thermomagnetic release systems for exact r.m.s detection of operating and fault currents. These contacts feature a double break system which enables safe breaking in high-energy networks with shortcircuit currents of up to 70.000 amps.

■ UNIFORM ACCESSORIES / UNIVERSAL CONNECTION SYSTEM

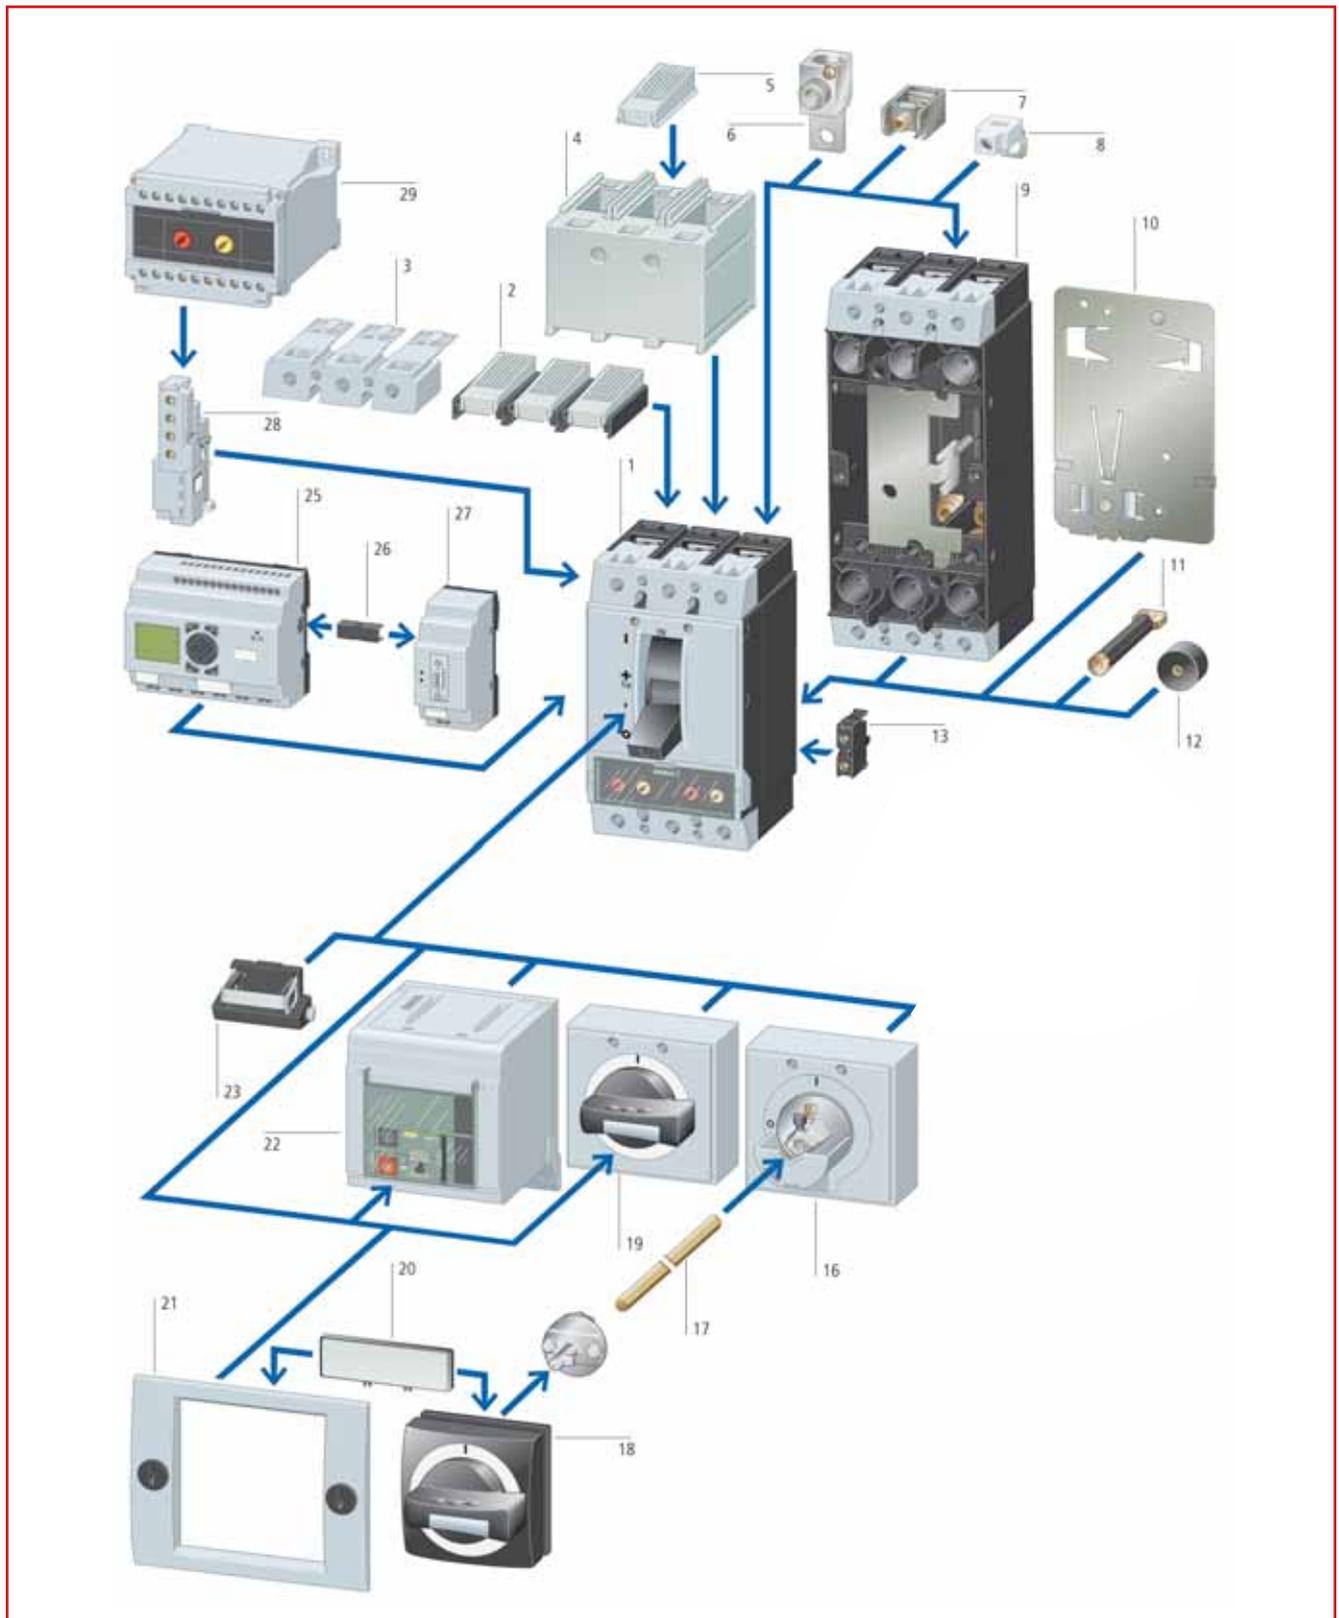

Front mountable retrofitable accessories. The installation location is the same for all frame sizes. The auxiliary contacts and trip-indicating modules are contact elements part of the RMQ Titan range of control switches. They are available in screw- or tension spring technology. This reduces assembly times and cuts costs. Effective shunt- and undervoltage releases are also available in combination with early make auxiliary contacts for Emergency Stop functions or load-shedding circuits and offer elegant solutions for a broad spectrum of applications. The connection features of MCCBs enable you to respond effectively to your system's demands, whatever they may be. Whether using copper or aluminium cables or copper busbars, these MCs offer the right solution for any connection type. An add-on part gives the circuit breaker IP (finger-proof) protection.

■ EASIER VISUALISATION, COMPARISON AND DOCUMENTATION OF CHARACTERISTIC CURVES

This characteristic curve program - available free-of-charge - supports the documentation of circuit-breakers used in completed switchgear systems. All setting parameters are easy to set, display in graphical form and print with the tripping characteristics. For example, you can make a direct comparison between MC and MO circuit breakers and H.R.C. fuses, which enables you to assess the selectivity class for the overload- and time-delayed overcurrent range.

TECHNICAL DATA

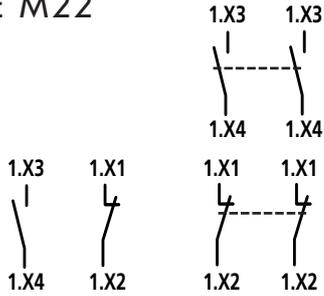

- At $I_{\Delta n} = 0,03 \text{ A}$: Time delay t_v permanently set to 10 ms.
- Alarm message $> 30 \% I_{dn}$ via yellow LED.
- Trip-indicating auxiliary contacts can be fitted by user (max. 2 auxillary contacts):
N/O: Order No: MM216376, N/C: Order No: MM216378 (see page 13) are reset via a reset toggle lever.
- When using the trip-indicating auxiliary contacts in the FI module, the N/C contact works as an N/O contact and the N/O contact as an N/C.
- Not for use in XCS insulated enclosures.
- Type MC1-XFI...U cannot be combined with shunt or undervoltage releases and an early-make auxiliary contact.
- Rated short-circuit breaking capacity values are determined by installed MC1 or when using a switch disconnector MC1-N by the back-up fuse to be used.

TIPS & TRICKS

The trip-indicating auxiliary contacts is the same contact as the standard auxiliary contact. It derives its function from its place of installation where it is installed (alarm contact on left).

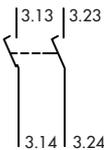

Maximum component installation with auxillary contacts: 1 x Standard auxiliary contact (HIN) M22-K. or M22-CK..
+ 1 x Trip-indicating contact (HIA) M22-K. or M22-CK..

EARLY-MAKE AUXILIARY CONTACT TYPE MC1-XHIVL

MC199432

SCHRACK INFO

For interlock- and load-shedding circuits as well as for early make of undervoltage release in main switch/Emergency stop applications.

TECHNICAL DATA

- Early-make during switch on and off (manual switch): approx. 20 ms
- Not in connection with undervoltage release
MC1-XU... or shunt release MC1-XA...
- Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

Maximum component installation with auxillary contacts:

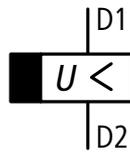

1 x early-make auxiliary contact

DESCRIPTION	TYPE	ORDER NO.
Early-make auxiliary contact, 2 N/O incl. 3 m cable	MC1-XHIVL	MC199432

■ UNDERVOLTAGE RELEASE TYPES MC1-XUL

MC199471

■ SCHRACK INFO

- Non-delayed breaking of circuit breaker MC/ switch disconnector MC-N when the control voltage drops below 35 % -70% Us.
- For use in Emergency stop devices in connection with EMERGENCY STOP button
- Installed in breaker
- Without auxiliary contact

■ TIPS & TRICKS

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Undervoltage release cannot be installed simultaneously with an shunt release or early-make auxiliary contact MC1-XHIV.

■ UNDERVOLTAGE RELEASE WITH TWO EARLY-MAKE AUXILIARY CONTACTS TYPES MC1-XUHIVL

MC199565

■ SCHRACK INFO

- With 2 early-make auxiliary contacts
- For early-make of the undervoltage release in main switch applications and for interlock- and load-shedding circuits
- Installed in breaker
- Other voltages and connection versions available on request

■ TIPS & TRICKS

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Early-make of auxiliary contacts during switch on and off (20ms). Undervoltage releases cannot be installed simultaneously with shunt releases or early-make auxiliary contact, type MC1-XHIV.

UNDERVOLTAGE RELEASE, OFF-DELAY TYPES MC-UVU, MC-XUVL

MC199471

MC496189

SCHRACK INFO

- Voltage drops less than 0,07–16 s do not cause MC circuit breakers or N switch disconnectors to trip.
- Suitable for voltages:
220 – 240 VAC 50/60 Hz
380 – 440 VAC 50/60 Hz
480 – 550 VAC 50/60 Hz
24 VAC/DC

TECHNICAL DATA

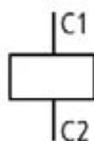

- Time-delay adjustable between 70 ms – 4 s
- With additional external capacitor:
30.000 μ F \geq 35 V to 8 s
90.000 μ F \geq 35 V to 16 s
- Special release MC1-XUVL is required.
- Cannot be installed at same time with early-make auxiliary contact MC1-XHIV... or shunt release MC1-XA....
- Time-delay device for separate mounting (Fixing: DIN rail or screws).
- For other operating voltages, please use a control transformer.

SHUNT RELEASE TYPE MC1-XAL

MC199744

SCHRACK INFO

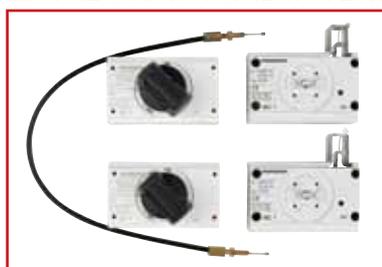

- Without auxiliary contact
- Switches are tripped by a voltage pulse or by the application of uninterrupted voltage

TECHNICAL DATA

When the shunt release is energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Shunt release cannot be installed simultaneously with undervoltage releases or early-make auxiliary contact MC1-XHIV.

MECHANICAL INTERLOCK FOR (DOOR COUPLING-) ROTARY HANDLES FOR MC1

MC191581

SCHRACK INFO

Rotary handle on switch or door coupling rotary handle additionally required.

Cannot be combined with remote operator or door frame.

At least 2 interlocking modules are required to construct a mechanical interlocking circuit. See Page 142 for possible combinations and variations of interlocking circuits. Bowden cable to be ordered separately.

DESCRIPTION	TYPE	ORDER NO.

ROTARY HANDLE DIRECTLY ON SWITCH FOR MC1

MC290127

SCHRACK INFO

- Complete with rotary drive
- Can also be combined with door frame

TECHNICAL DATA

Available in the following versions:

Type MC.-XDV

Lockable in the "0" position (up to three padlocks), black/grey

Type MC.-XDVR

Lockable in the "0" position (up to three padlocks), Emergency stop red/yellow

Type MC.-XDTV

Lockable in the "0" position on handle, modification also available in "1" position, black/grey

Type MC.-XDTVR

Lockable in "0" position, Emergency Stop red/yellow

Version comes with door interlock:

- Door frame supplied with door interlock
- Rotary handle can be rotated 90° for horizontally-mounted switches
- In the ON position, can be defeated from the outside using a 1 mm pin
- Cannot be defeated in the locked OFF and ON positions
- Door can be opened in OFF
- Can only be switched on when door closed

DOOR COUPLING ROTARY HANDLE FOR MC1

MC190160

MC190172

MC290127

SCHRACK INFO

- Complete unit including rotary drive and coupling parts
- Degree of Protection IP66
- Rotary handle can be rotated 90° for horizontally-mounted switches
- Cannot be defeated in the locked OFF and ON positions
- Can be modified when in the unlocked ON position, can be defeated from the outside with a screwdriver
- Door can be opened in OFF
- External warning plate/designation plate can be clipped on

NOTES

- Order extension shaft separately!

TECHNICAL DATA

Available in the following versions:

Type MC.-XTVD

Lockable in the "0" position on handle with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDV

Lockable in the "0" position on handle and switch, with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDVR

Lockable in the "0" position on handle and switch with up to three padlocks, with door interlock, Emergency stop red/yellow

BOX TERMINALS FOR MC1

MC292240

SCHRACK INFO

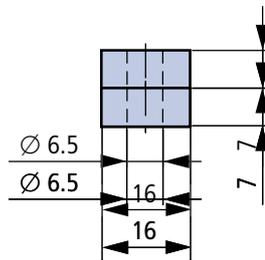

- Standard connection for all MC1, MC1-PN and MC1-N switches
- Conversion kit for switches with screw connection
- Contains parts for one switch side
- Installed inside the switch housing
- Use cover plate MC.-XSKA
- Terminal capacities
CU conductors 1 x 10–70 mm²
CU cables 2 x 6–25 mm²

DESCRIPTION	TYPE	ORDER NO.

TUNNEL TERMINAL FOR MC1

MC196730

SCHRACK INFO

- Contains parts for one switch side, top or bottom
- With terminal for control circuit for 1 x 0,75–2,5 mm², 2 x 0,75–1,5 mm² Cu conductor
- Installed outside switch housing
- Maximum specified cross-section can only be connected stranded and without end sleeve.
- Cover plate MC1(-4)-XKSA must be installed (supplied).
- Terminal capacities:
Cu cable, Al cable 95 mm²

TECHNICAL DATA

- for Cu- And Al cables
- Includes cover plate
- Stranded round conductor / stranded sector-shaped conductor
- Use with flexible and ultra-flexible conductor end sleeves

DESCRIPTION	TYPE	ORDER NO.

INSULATED ENCLOSURE XCI

MC191522

SCHRACK INFO

- Only for switches with box terminals for direct cable connection
- With door coupling rotary handle
- Complete unit includes all necessary functional parts
- Degree of protection IP65
- MC1-XCI23 housing with flanges
- MC1-XCI43 are fitted with gland plates

TECHNICAL DATA

Enclosure suitable for installation of circuit-breakers and switch-disconnectors for separate mounting with top and bottom cable entry.

Including fixing straps for wall mounting. Short circuit protection at 415 V 50/60 Hz to 10 kA.

Not in combination with remote operator, plug-in- or withdrawable unit.

Additional insulated terminals for 4 or 5 pole must be ordered separately.

Available in the following versions:

Standard, black/grey

Lockable in the "0" position at handle with up to 3 padlocks. Additionally with cover interlock.

For Emergency stop, red/yellow

Lockable on handle and switch lockable with up to 3 padlocks in the "0" position on handle. Additionally with cover interlock and lockable at switch in the "0" position.

SWITCH DISCONNECTOR UP TO 250A TYPES MC2-PN, MC2-PN-4, MC2-N, MC2-N-4

MC216233

SCHRACK INFO

- 3- and 4-pole versions
- Rated uninterrupted current up to 250A
- Switch disconnecter, MC2-PN type, two switch positions 0/I, cannot be tripped remotely
- Switch disconnecter MC2-N, with trip setting "0"; "+"; "I", can be tripped remotely with undervoltage/shunt release
- Screw terminals as standard, box terminals as accessories
- Remote trip MC2-N can also be combined with remote operator MC-XR
- Main switch characteristics including positive drive according to IEC/EN 60204 & VDE 0113
- Isolating characteristics according to IEC/EN 60947-3 and VDE 0660. Protection against accidental contact accord. to VDE 0160 Part 100
- Meets IEC/EN 60947-2
- Rated uninterrupted current = Rated current
- Rated short-circuit breaking capacity values: I_{cm} 5,5kA
- Rated short-time withstand current: I_{cw} 3,5kA

RESIDUAL CURRENT (RCD) RELEASE UP TO 250A TYPES MC2-4-XFI, MC2-4-XFIA

MC296720

SCHRACK INFO

- Direct mounting on 4 pole MC2 circuit breaker and MC2-N switch disconnector
- Type MC2-4-XFI pulse current sensitive accord. to core-balance principle
- Specifications to IEC/EN 60947-2
- Bottom mounting up to 250 A

TECHNICAL DATA

- Independent of mains- and auxiliary voltage, $U_e = 280 \text{ V} - 690 \text{ V } 50/60 \text{ Hz}$
- Auxiliary contact: 1 N/O, 1 N/C reset via reset feature
- Type XFI(A)30: Rated fault current $I_{\Delta n} = 0,03 \text{ A}$, suitable for human protection to Annex B of IEC/EN 60947-2 and VDE 664 Parts 2 and 3
- Type XFI: Rated fault current $I_{\Delta n} = 0,1-0,3-1-3 \text{ A}$, time-delay $t_v = 60-150-300-450 \text{ ms}$,
Type XFIA: Rated fault current $I_{\Delta n} = 0,1-0,3-1 \text{ A}$, time-delay $t_v = 60-150-300-450 \text{ ms}$,
AC/DC current sensitivity accord. to core-balance principle (0–200 kHz)
- Internal supply voltage $U_e = 50-400 \text{ V}$
- Note that response threshold is dependent on frequency! (See frequency response characteristic curve, Page 245).

STANDARD AUXILIARY CONTACT / TRIP-INDICATING AUXILIARY CONTACT TYPE M22

MM216378

SCHRACK INFO

- Breaking with the main contacts, used for indicating and interlocking tasks
- General trip indication "+" with trip due to voltage release, overload release or short-circuit-release

TECHNICAL DATA

Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

The trip-indicating auxiliary contact is the same contact as the standard auxiliary contact. It derives its function from where it is installed (alarm contact on left).

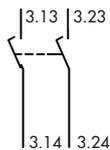

Maximum component installation with auxiliary contacts: 2 x Standard auxiliary contact (HIN) M22-K. or M22-CK...
+ 1 x Trip-indicating contact (HIA) M22-K. or M22-CK...

DESCRIPTION	TYPE	ORDER NO.
1 NO contact with screw terminals	M22-K10	MM216376
1 NC contact with screw terminals	M22-K01	MM216378
2 NO contacts with cage clamp terminals	M22-CK20	MM107898
2 NC contacts with cage clamp terminals	M22-CK02	MM107899

EARLY-MAKE AUXILIARY CONTACT TYPE MC2-XHIVL

MC299430

SCHRACK INFO

For interlock- and load-shedding circuits as well as for early make of undervoltage release in main switch/Emergency stop applications.

TECHNICAL DATA

- Early-make during switch on and off (manual switch): approx. 20 ms
- Not in connection with undervoltage release
MC2-XU... or shunt release MC2-XA...
- Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

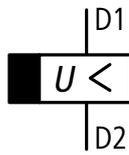

Maximum component installation with auxiliary contacts:
1 x early-make auxiliary contact

DESCRIPTION	TYPE	ORDER NO.
Early-make auxiliary contact, 2 NO	MC2/3-XHIV	MC299430

■ UNDERVOLTAGE RELEASE TYPES MC2-XU

MC299499

■ SCHRACK INFO

- Non-delayed breaking of circuit breaker MC/ switch disconnecter MC-N when the control voltage drops below 35 % - 70% U_s .
- For use in Emergency stop devices in connection with Emergency stop buttons
- Installed in breaker
- Without auxiliary contact

■ TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Undervoltage releases cannot be installed at the same time with shunt releases or early-make auxiliary contact, type MC2-XHIV.

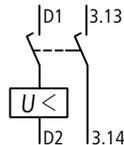

VOLTAGE		TYPE	ORDER NO.
24 VAC	Screw terminals	MC2/3-XU24AC	MC299491
24 VDC	Screw terminals	MC2/3-XU24DC	MC299509

380-440 V AC	Screw terminals	MC2/3-XU380-440AC	MC299501

Other voltage variants available upon request.

■ UNDERVOLTAGE RELEASE WITH TWO EARLY-MAKE AUXILIARY CONTACTS TYPES MC2-XUHIV

MC299591

■ SCHRACK INFO

- With 2 early-make auxiliary contacts
- For early-make of the undervoltage release in main switch applications and for interlock- and load-shedding circuits
- Installed in breaker
- Other voltages and connection versions available on request

■ TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Early-make of auxiliary contacts during switch on and off (20ms). Undervoltage releases cannot be installed simultaneously with shunt releases or early-make auxiliary contact, type MC2-XHIV.

VOLTAGE		TYPE	ORDER NO.
208 - 240 VAC	screw terminals	MC2/3-XUHIV230V	MC299591
380 - 440 VAC	screw terminals	MC2/3-XUHIV400V	MC299594

UNDERVOLTAGE RELEASE, OFF-DELAY TYPES MC-UVU, MC-XUV

MC295927

MC299499

SCHRACK INFO

- Voltage drops less than 0,07–16 s do not cause MC circuit breakers or N switch disconnectors to trip.
- Suitable for voltages:
220 – 240 VAC 50/60 Hz
380 – 440 VAC 50/60 Hz
480 – 550 VAC 50/60 Hz
24 VAC/DC

TECHNICAL DATA

- Time-delay adjustable between 70 ms – 4 s
- With additional external capacitor:
30.000 μ F \geq 35 V to 8 s
90.000 μ F \geq 35 V to 16 s
- 1 x special release MC2-XUV required.
- Cannot be installed simultaneously with early-make auxiliary contact MC2-XHIV... or shunt release MC2-XA....
- Time-delay device for separate mounting (Fastening: DIN rail or screws).
- For other operating voltages, please use a control transformer.

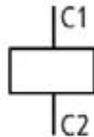

NAME	TYPE	ORDER NO.
Time-delay unit	MC-UVU	MC196154
Special undervoltage release for time-delay unit MC2	MC2/3-XUV	MC295927

Other voltage variants available upon request.

SHUNT RELEASE TYPES MC2-XA

MC299754

SCHRACK INFO

- Without auxiliary contact
- Switches are tripped by a voltage pulse or by the application of uninterrupted voltage

TECHNICAL DATA

When the shunt release is energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Shunt release cannot be installed simultaneously with undervoltage releases or early-make auxiliary contact MC1-XHIV.

VOLTAGE	TYPE	ORDER NO.
24 VAC/DC	MC2/3-XA24V	MC299754
208 - 250 VAC/DC	MC2/3-XA230V	MC299763

Other voltage variants available upon request.

REMOTE OPERATOR FOR MC2

MC299832

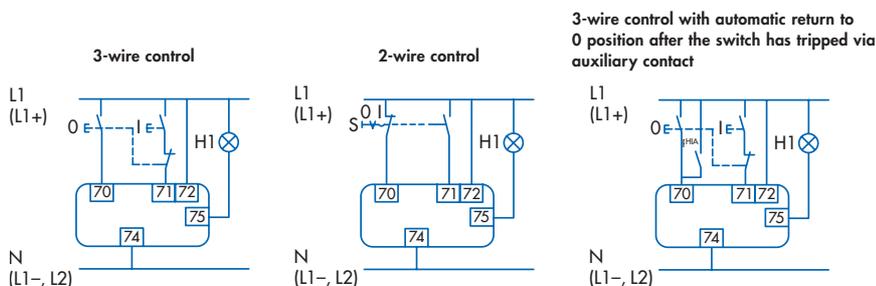

SCHRACK INFO

- Remote operator can be combined with circuit breaker MC and switch disconnector MC-N, but not with switch disconnector MC-PN.
- Do not deactivate switch simultaneously via remote control and trip via undervoltage/shunt release.

TECHNICAL DATA

- On/Off breaking and reset by means of 2-wire or 3-wire control.
- MC299832 can be synchronized
- Breaking time On: ≤ 60 ms for MC2-XR208-240AC
 ≤ 170 ms for MC2-XRD208-240AC
- Local manual breaking possible
- Pause between Off and On: 3 secs.
Command is ignored
- Function of Terminal 75:
Ready for activation signal when the cover is closed and not locked.
AC-15: 2 A/400 V
DC-13: 0,2 A/220 V

ROTARY HANDLES DIRECTLY ON SWITCH FOR MC2

MC290127

SCHRACK INFO

- Complete with rotary drive
- Can also be combined with door frame

TECHNICAL DATA

Available in the following versions:

Type MC.-XDV

Lockable in the "0" position (up to three padlocks), black/grey

Type MC.-XDVR

Lockable in the "0" position (up to three padlocks), Emergency stop red/yellow

Type MC.-XDTV

Lockable in the "0" position on handle, modification also available in "1" position, black/grey

Type MC.-XDTV

Lockable in "0" position, Emergency Stop red/yellow

Version comes with door interlock:

- Door frame supplied with door interlock
- Rotary handle can be rotated 90° for switches mounted horizontally
- In the ON position, can be defeated from the outside using a 1 mm pin
- Cannot be defeated in the locked OFF and ON positions
- Door can be opened in OFF
- Can only be switched on when door closed

DOOR COUPLING ROTARY HANDLE FOR MC2

MC190160

MC190160

MC190160

SCHRACK INFO

- Complete unit includes rotary drive and coupling parts
- Degree of Protection IP66
- Rotary handle can be rotated 90° for horizontally-mounted switches
- Cannot be defeated in the locked OFF and ON positions
- Can be modified when in the unlocked ON position, can be defeated from the outside with a screwdriver
- Door can be opened in OFF
- External warning plate/designation plate can be clipped on

NOTES

- Order extension shaft separately!

TECHNICAL DATA

Available in the following versions:

Type MC.-XTVD

Lockable in the "0" position on handle with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDV

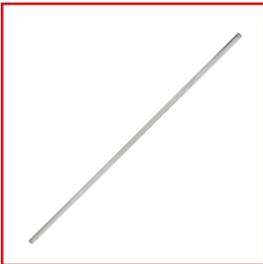

Lockable in the "0" position on handle and switch, with up to three padlocks, with door interlock, black/grey

INSULATED ENCLOSURE XCI

MC291524

SCHRACK INFO

- For switches with box terminals only, for direct cable connection
- With door coupling rotary handle
- Complete unit including all necessary functional parts
- Degree of protection IP65
- Comes with gland plates

TECHNICAL DATA

Enclosure suitable for installation of circuit-breakers and switch-disconnectors for separate mounting with top and bottom cable entry. Includes fixing straps for wall mounting.

Short circuit protection at 415 V 50/60 Hz to 10 kA.

Not in combination with remote operator, plug-in- or withdrawable unit.

Additional insulated terminals for 4 or 5 pole must be ordered separately.

Available in the following versions:

Standard, black/grey

Lockable in the "0" position at handle with up to 3 padlocks. Additionally with cover interlock.

For Emergency stop, red/yellow

Lockable on handle and switch with up to 3 padlocks in the "0" position on handle. Additionally with cover interlock and lockable at switch in the "0" position.

SWITCH DISCONNECTOR UP TO 630A TYPES MC3-PN, MC3-PN-4, MC3-N, MC3-N-4

MC340035

SCHRACK INFO

- 3- and 4-pole version
- Rated uninterrupted current up to 630A
- Switch disconnecter type MC3-PN, 2 switch positions 0/I, cannot be tripped remotely
- Switch disconnecter type MC3-N, with trip setting "0"; "+"; "I", can be tripped remotely with undervoltage/shunt release, trip-indicating auxiliary contacts possible
- For type MC...-N switch disconnectors, undervoltage/shunt releases and trip-indicating auxiliary contacts can also be used.
- Type MC3-N... can also be combined with remote control MC-XR...
- Screw terminals as standard, box terminals as accessories
- Remote-trip MC3-N can also be combined with remote operator
- Properties of main switches including positive drive to IEC/EN 60204 and VDE 0113
- Isolating characteristics according to IEC/EN 60947-3 and VDE 0660. Protection against accidental contact accord. to VDE 0160 Part 100

MC396707

MC396707

SCHRACK INFO

- 3- and 4-pole version
- For circuit breaker MC3 and switch disconnecter MC3-N

TECHNICAL DATA

- Withdrawable unit complete with control circuit plug unit
- I_n max. at 20°C – 605 A
- I_n max. at 40°C – 550 A
- Mounting position: vertical, 90° left
- 3 positions: Retracted, test, extended. The 3 positions are shown mechanically.
- Auxiliary contacts can also be used for remote signaling. Either one N/C or N/O contact per position.
- All connections of auxiliary switches (HIA, HIN, HIV) and undervoltage and shunt releases to the control circuit plug units are already present.
- **Withdrawable module only available in combination with switch.**
- Add an A to switch part number (e.g.: MC340232A) – Switch will be supplied ready for use with withdrawable feature.
- Socket base can be ordered separately, available pre-assembled.

STANDARD AUXILIARY CONTACT / TRIP-INDICATING AUXILIARY CONTACT TYPE M22

MM216378

SCHRACK INFO

- Breaking with the main contacts, used for indicating and interlocking tasks
- General trip indication “+” with trip due to voltage release, overload release or short-circuit-release

TECHNICAL DATA

Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

The trip-indicating auxiliary contacts is the same contact as the standard auxiliary contact. It derives its function from where it is installed (alarm contact on left)

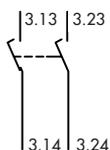

Maximum component installation with auxiliary contacts: 3 x Standard auxiliary contact (HIN) M22-K. or M22-CK..
+ 1 x Trip-indicating contact (HIA) M22-K. or MK22-CK.

DESCRIPTION	TYPE	ORDER NO.

EARLY-MAKE AUXILIARY CONTACT TYPE MC3-XHIV

MC299430

TIPS & TRICKS

Maximum component installation with auxiliary contacts:

1 x early-make auxiliary contact

SCHRACK INFO

For interlock- and load-shedding circuits as well as for early make of undervoltage release in main switch/Emergency stop applications.

TECHNICAL DATA

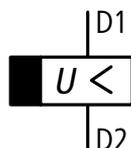

- Not in connection with undervoltage release MC3-XU... or shunt release MC3-XA... Early-make during switch on and off (manual switch): approx. 20 ms
- Not in connection with remote operator MC-XR Undervoltage- or shunt releases
- Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

DESCRIPTION	TYPE	ORDER NO.
Early-make auxiliary contact, 2 NO	MC2/3-XHIV	MC299430

UNDERVOLTAGE RELEASE TYPES MC3-XU

MC299499

SCHRACK INFO

- For use in Emergency stop devices in connection with Emergency stop buttons
- Installed in breaker
- Without auxiliary contact
- Not-delayed breaking of circuit breaker MC/ switch disconnector MC-N when the control voltage drops below 35 % - 70% Us.

TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Undervoltage releases cannot be installed at the same time as operating current releases or early-make auxiliary contact MC2-XHIV.

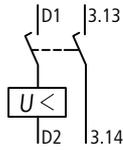

VOLTAGE	TYPE	ORDER NO.

UNDervOLTAGE RELEASE WITH TWO EARLY-MAKE AUXILIARY CONTACTS TYPES MC3-XUHIV

MC299591

SCHRACK INFO

- With 2 early-make auxiliary contacts
- For early-make of the undervoltage release in main switch applications and for interlock- and load-shedding circuits
- Installed in contact
- Other voltages and connection versions available on request

TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Early-make of auxiliary contacts during switch on and off (20ms). Undervoltage releases cannot be installed at the same time as operating current releases or early-make auxiliary contact MC2-XHIV.

UNDervOLTAGE RELEASE, OFF-DELAY TYPES MC-UVU, MC-XUV

MC295927

MC299499

SCHRACK INFO

- Voltage drops less than 0,07–16 s do not cause MC circuit breakers or N switch disconnectors to trip.
- Suitable for voltages:
220 – 240 VAC 50/60 Hz
380 – 440 VAC 50/60 Hz
480 – 550 VAC 50/60 Hz
24 VAC/DC

TECHNICAL DATA

- Time-delay adjustable between 70 ms – 4 s
- With additional external capacitor:
30.000 μ F \geq 35 V to 8 s
90.000 μ F \geq 35 V to 16 s
- 1 x special release MC2-XUV required.
- Cannot be installed simultaneously with early-make auxiliary contact MC2-XHIV... or shunt release MC2-XA....
- Time-delay device for separate mounting (Fastening: DIN rail or screws).
- For other operating voltages, please use a control transformer.

SHUNT RELEASE TYPES MC2-XA

MC299754

SCHRACK INFO

- Without auxiliary contact
- Switches are tripped by a voltage pulse or by the application of uninterrupted voltage

NOTES

When the shunt release is energized, accidental contact with the main contacts of the switch during attempts to switch on is safely prevented. Shunt release cannot be installed simultaneously with undervoltage release.

VOLTAGE	TYPE	ORDER NO.
24 V AC/DC	MC2-XA24VAC/DC	MC299754
208 - 250 V AC/DC	MC2-XA230VAC/DC	MC299763

REMOTE OPERATOR FOR MC3

MC299832

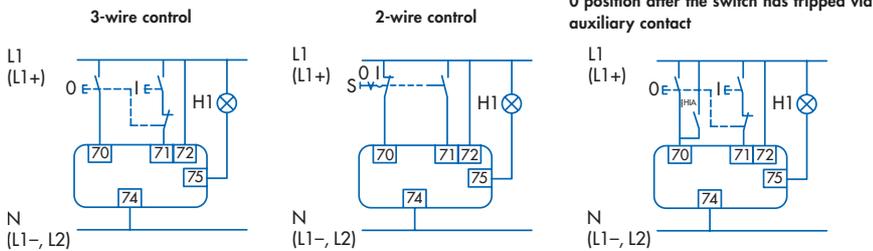

SCHRACK INFO

- Remote operator can be combined with circuit breaker MC and switch disconnector MC-N, but not with switch disconnector MC-PN.
- Do not deactivate simultaneously via remote control and trip via undervoltage/operating current release.

TECHNICAL DATA

- On/Off breaking and reset by means of 2-wire or 3-wire control.
 - Can be synchronized
 - Breaking time On: ≤ 80 ms
 - Local manual breaking possible
 - Pause between Off and On: 3 sec.
 - On command is ignored
- Function of Terminal 75:
Ready for operation signal, when cover is closed and not locked.
AC-15: 2 A/400 V
DC-13: 0,2 A/220 V

ROTARY HANDLE DIRECTLY ON SWITCH FOR MC3

MC390129

SCHRACK INFO

- Complete with rotary drive
- Can also be combined with door frame

TECHNICAL DATA

Available in the following versions:

Type MC.-XDV

Lockable in the "0" position (up to three padlocks), black/grey

Type MC.-XDVR

Lockable in the "0" position (up to three padlocks), Emergency stop red/yellow

DESCRIPTION	TYPE	ORDER NO.
Lockable rotary handle for MC3, black/grey	MC3-XDV	MC390129
Lockable rotary handle for MC3, Emergency stop red/yellow	MC3-XDVR	MC390140

DOOR COUPLING ROTARY HANDLE FOR MC3

MC390170

MC390170

MC390170

SCHRACK INFO

- Complete unit includes rotary drive and coupling parts
- Degree of Protection IP66
- Rotary handle can be rotated 90° for horizontally-mounted switches
- Cannot be defeated in the locked OFF and ON positions
- Can be modified when in the unlocked ON position, can be defeated from the outside with a screwdriver
- Door can be opened in OFF
- External warning plate/designation plate can be clipped on

NOTES

- Order extension shaft separately!

TECHNICAL DATA

Available in the following versions:

Type MC.-XTVD

Lockable in the "0" position on handle with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDV

Lockable in the "0" position on handle and switch, with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDVR

Lockable in the "0" position on handle and switch with up to three padlocks, with door interlock, Emergency stop red/yellow

DESCRIPTION	TYPE	ORDER NO.
Rotary handle for MC3 with door interlock, lockable, black/grey	MC3-XTVD	MC390170
Door coupling rotary handle for MC3 with door interlock, lockable, "0", "1", black/grey	MC3-XTVDV	MC390176

BOX TERMINALS FOR MC3

MC390042

SCHRACK INFO

- Installed within the switch housing
- If $U_e \geq 525V$ AC, use cover plate MC3(-4)-XSKA
- Conversion kit for switches with screw connection
- Contains parts for one switch side
- Terminal capacities:
 - Copper lines/cables 500A: 1 x 35 – 240 mm²
 - 2 x 16 – 120 mm²
 - Copper strip 630A: 10 x 24 x 1 + 5 x 24 x 1 or (2x) 8 x 24 x 1

TUNNEL TERMINAL FOR MC3

MC391461

MC391461

SCHRACK INFO

- Contains parts for one switch side located at top or bottom for 3 or 4-pole switches
- Comes with terminal for control circuit cabling as standard for 1 x 0,75 – 2,5 mm² or 2 x 0,75 – 1,5 mm² copper conductors
- Terminal capacities:
 - XKA1 max. 350A: Cu/Al cable 1 x 16 – 185 mm²*
 - XKA2 max. 630A: Cu/Al-cable 2 x 50 – 240 mm²
 - (* depending on cable manufacturer up to 240 mm² can be connected)
- Installed outside switch housing

TECHNICAL DATA

- For Cu- and Al cables
- Includes cover plate
- Stranded round conductor / stranded sector-shaped conductor

DESCRIPTION	TYPE	ORDER NO.
Tunnel terminal 185 mm ² , 3 pole for MC3	MC3-XKA1	MC391459
Tunnel terminal 2 x 240 mm ² , 3-pole for MC3	MC3-XKA2	MC391461

■ CONNECTION WIDTH EXTENSION FOR MC3

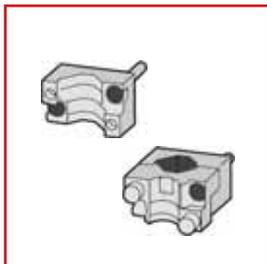

MC390514

■ SCHRACK INFO

- Contains parts for one switch side incl. phase separator
- Central holes, max. 2 cable lugs per phase
- Distance between pole centers 70 mm
- Terminal capacities: Copper cable lugs 2 x 300 mm²
Copper rails (2x) 10 x 50

DESCRIPTION	TYPE	ORDER NO.

CONNECTION TERMINALS FOR CONNECTION WIDTH EXTENSION MC3

MC390782 + MC390784

SCHRACK INFO

- Contains parts for one switch side located at top or bottom for 3- or 4-pole switches
- Only in combination with connection width extension
- Use with flexible and highly-flexible conductor end sleeves
- Comes with terminal for control circuit cabling as standard for 1 x 0,75 – 2,5 mm² or 2 x 0,75 – 1,5 mm² Cu conductors
- Terminal capacities: Copper cable 2 x 120 – 300 mm²
Cu strip (2x) 11 x 21 x 1 mm

PHASE SEPERATOR PLATE FOR MC3

MC4-XKP

SCHRACK INFO

- Contains parts for one switch side located at top or bottom for 3- or 4-pole switches
- Supplied with the connection width extension
- Insulation protection where cable lugs, busbars or flat conductor are connected.
- Cannot be combined with tunnel terminal, rear-side connection

DESCRIPTION	TYPE	ORDER NO.
Phase seperator plate for MC3	MC3-XKP	MC390512
Phase seperator plate for MC3-4	MC3-4-XKP	MC390513

CONTROL CIRCUIT TERMINAL FOR MC3

MC196739

SCHRACK INFO

- Contains parts for two terminals located at top or bottom for 3/ 4 pole switches
- Included with tunnel terminal
- Terminal capacities: Screw connection 1 x 0,75 – 2,5 mm², 2 x 0,75 – 1,5 mm²

DESCRIPTION	TYPE	ORDER NO.
Control circuit terminal for box terminal MC3	MC3/4-XSTK	MC196739

■ TERMINAL COVER FOR MC3

MC390045

■ SCHRACK INFO

- Protection against accidental contact when using cable lugs, rails or tunnel terminals
- Contains parts for one switch side located at top or bottom for 3- or 4-pole switches
- Degree of protection IP4X front, side and rear, IP1X on the connection side when using insulated conductor material
- Cover plate included with tunnel terminals

DESCRIPTION	TYPE	ORDER NO.
Terminal cover, 3 pole for MC3	MC3-XKSA	MC390045
Terminal cover, 4 pole for MC3-4	MC3-4-XKSA	MC396801

■ IP2X FINGER PROTECTION FOR DIRECT-MOUNTED MC3 SWITCHES

MC196744

MC196748

■ SCHRACK INFO

- Increases the protection against accidental contact to IP2X
- Protects when reaching into the cable connection area when cables are connected in box terminal
- For 2 conductors, maximum cross-section 70 mm²
- MC3-XIPA and MC3-4-XIPA only in combination with cover plate

DESCRIPTION	TYPE	ORDER NO.
FOR BOX TERMINAL		
Finger protection, 3 pole for MC3	MC3-XIPK	MC396804

INSULATED ENCLOSURE XCI

MC391525

SCHRACK INFO

- Only for switches with box terminals for direct cable connection
- With door coupling rotary handle
- Complete including all necessary functional parts
- Degree of protection IP65
- Comes with gland plates

TECHNICAL DATA

Enclosure suitable for installation of circuit-breakers and switch-disconnectors for separate mounting with top and bottom cable entry. Including fixing straps for wall mounting.

Short circuit protection at 415 V 50/60 Hz to 10 kA.

Not in combination with remote operator, plug-in- or withdrawable unit.

Additional insulated terminals for 4 or 5 pole must be ordered separately.

Available in the following versions:

Standard, black/grey

Lockable in the "0" position at handle with up to 3 padlocks. Additionally with cover interlock.

For Emergency stop, red/yellow

Lockable on handle and switch with up to 3 padlocks. Lockable in the "0" position on handle. Additionally with cover interlock and lockable at switch in the "0" position.

DESCRIPTION	MAX. RATED UNINTERRUPTED CURRENT	TYPE	ORDER NO.

DEVICE ADAPTERS FOR CIRCUIT-BREAKERS AND SWITCH-DISCONNECTORS FOR 60 mm MC3 BUSBAR SYSTEM

MC391668

SCHRACK INFO

- Cover plate MC-XKR necessary for frame size 2 and 3.
- For mounting on flat copper rails 12 x 5 mm bis 30 x 10 mm
- Double T and triple T profile
- Snaps onto the voltage-free busbar
- Rated operational voltage, Ue: 690 V

TECHNICAL DATA

MC 3 up to 630 A:

- Connection to system from top
- For component adapter MC3-XKR13 with rear connection, cover plate needed

DESCRIPTION	TYPE	ORDER NO.
60 mm busbar adapter 550 A, 3 pole for MC3	32170	MC391700

DOOR SEALING FRAME FOR MC3

MC394645

SCHRACK INFO

- For toggle levers, rotary handles with rotary drive and remote operator
- Degree of protection IP40
- For rectangular cut-out on doors and enclosures with material thicknesses of 1,5 – 5 mm
- External warning plate/designation plate can be clipped on

DESCRIPTION	TYPE	ORDER NO.
Door sealing frame for MC3	MC3-XBR	MC394645

TOGGLE LEVER LOCKING DEVICE FOR MC3

MC390201

SOCKET BASE AND WITHDRAWABLE MODULE FOR MC4

MC396707

MC396707

SCHRACK INFO

- 3- and 4 pole versions
- for MC4 circuit breakers and MC4-N switch disconnectors

TECHNICAL DATA

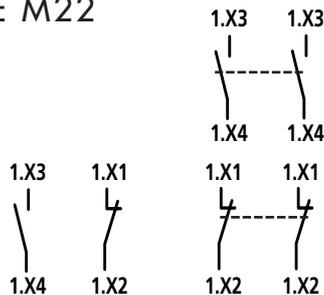

- Withdrawable unit complete with control circuit plug unit
- I_n max. at 20° C – 1600A
- I_n max. at 40° C – 1500A
- Mounting position: vertical
- 3 positions: Retracted, test, extended. The 3 positions are indicated mechanically.
- Auxiliary contacts can also be used for remote signaling. Either one N/C or N/O contact per position.
- All connections of auxiliary switches (HIA, HIN, HIV) and undervoltage and shunt releases to the control circuit plug units come pre-fitted.
- **Withdrawable module only available in combination with switch.**
- Add A to switch part number (MC340232A), comes supplied ready for use with withdrawable units.
- Socket base can be ordered separately and supplied pre-assembled.

STANDARD AUXILIARY CONTACT / TRIP-INDICATING AUXILIARY CONTACT TYPE M22

MM216378

SCHRACK INFO

- Switches with the main contacts, used for indicating and interlocking tasks
- General trip indication “+” with trip due to voltage release, overload release or short-circuit-release

TECHNICAL DATA

Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

The trip-indicating auxiliary contacts is the same contact as the standard auxiliary contact. It derives its function from where it is installed (alarm contact on left).

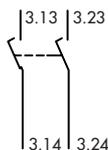

Maximum component installation with auxiliary contacts: 3 x Standard auxiliary contact (HIN) M22-K. or M22-CK..
+ 2 x Trip-indicating contact (HIA) M22-K. or M22-CK..

DESCRIPTION	TYPE	ORDER NO.
1 NO contact with screw terminals	M22-K10	MM216376
1 NC contact with screw terminals	M22-K01	MM216378
2 NO contacts with cage clamp terminals	M22-CK20	MM107898
2 NC contacts with cage clamp terminals	M22-CK02	MM107899

EARLY-MAKE AUXILIARY CONTACT TYPE MC4-XHIV

MC496172

SCHRACK INFO

For interlock- and load-shedding circuits as well as for early make of undervoltage release in main switch/Emergency stop applications.

TECHNICAL DATA

- Not in connection with undervoltage release MC4-XU... or shunt release MC4-XA... Early-make during switch on and off (manual switch): approx. 20 ms
- Not in connection with remote operator MC-XR
Undervoltage- or shunt voltage releases
- Breaking capacity: AC15: 4 A / 230 VAC
DC13: 3 A / 24 VDC

TIPS & TRICKS

Maximum component installation with auxiliary contacts:

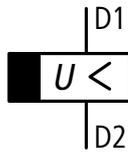

1 x early-make auxiliary contact

DESCRIPTION	TYPE	ORDER NO.
Early-make auxiliary contact, 2 NO	MC4-XHIV	MC496172

■ UNDERVOLTAGE RELEASE TYPES MC4-XU

MC496189

■ SCHRACK INFO

- For use in Emergency stop devices in connection with Emergency stop buttons
- Installed in breaker
- Without auxiliary contact
- Non-delayed breaking of circuit breaker MC/ switch disconnector MC-N when the control voltage drops below 35 % - 70% Us.

■ TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Undervoltage releases cannot be installed at the same time with operating current releases or early-make auxiliary contact, type MC4-XHIV.

Other voltage variants available upon request.

■ UNDERVOLTAGE RELEASE WITH TWO EARLY-MAKE AUXILIARY CONTACTS TYPES MC4-XHIV

MC496221

■ SCHRACK INFO

- With 2 early-make auxiliary contacts
- For early-make of the undervoltage release in main switch applications and for interlock- and load-shedding circuits
- Installed in breaker
- Other voltages and connection versions available on request

■ TECHNICAL DATA

When the undervoltage release is de-energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Early-make of auxiliary contacts during switch on and off (20ms). Undervoltage releases cannot be installed at the same time with operating current releases or early-make auxiliary contact, type MC4-XHIV.

UNDervOLTAGE RELEASE, OFF-DELAY TYPES MC4-UVU, MC4-XUV

MC196154

MC299499

SCHRACK INFO

- Voltage drops less than 0,07–16 s do not cause MC circuit breakers or N switch disconnectors to trip.
- Suitable for voltages:
220 – 240 VAC 50/60 Hz
380 – 440 VAC 50/60 Hz
480 – 550 VAC 50/60 Hz
24 VAC/DC

TECHNICAL DATA

- Time-delay adjustable between 70 ms – 4 s
- With additional external capacitor:
30.000 μ F \geq 35 V to 8 s
90.000 μ F \geq 35 V to 16 s
- Special release MC4-XUVL is required.
- Cannot be installed at same time with early-make auxiliary contact MC4-XHIV... or operating current trip MC4-XA....
- Time-delay device for separate assembly (fixing: Top-hat rail or screws).
- For other operating voltages, please use a control transformer.

SHUNT RELEASE TYPES MC4-XA

MC496451

SCHRACK INFO

- Without auxiliary contact
- Switches are tripped by a voltage pulse or by the application of uninterrupted voltage

TECHNICAL DATA

When the shunt release is energized, accidental contact with the main contacts of the switch is safely prevented during attempts to switch on. Undervoltage releases cannot be installed at the same time with undervoltage release or early-make auxiliary contact, type MC4-XHIV.

VOLTAGE	TYPE	ORDER NO.
24 VAC/DC	MC4-XA24AC/DC	MC496447

REMOTE OPERATOR FOR MC4

MC496685

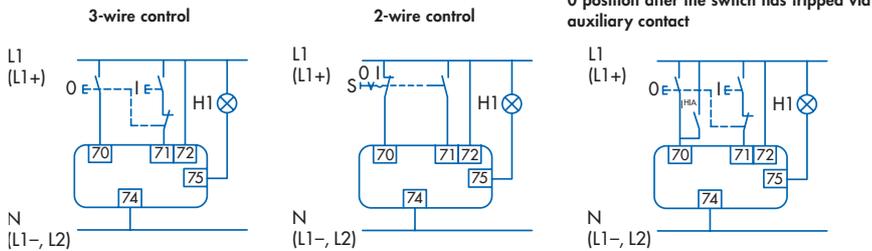

SCHRACK INFO

- Remote operator can be combined with circuit breaker MC and switch disconnector MC-N, but not with switch disconnector MC-PN.
- Do not switch off switch simultaneously via remote control and release via undervoltage/shunt release.

TECHNICAL DATA

- On/Off breaking and reset by means of 2-wire or 3-wire control.
- Can be synchronized
- Breaking time On: ≤ 100 ms
- Local manual breaking possible
- Pause between Off and On: 3 sec.
On command is ignored
- Function of Terminal 75:
Ready for operation signal, when cover is closed and not locked.
AC-15: 2 A/400 V
DC-13: 0,2 A/220 V

MECHANICAL INTERLOCK FOR REMOTE OPERATOR FOR MC4

MC294543

MC494547 - montiert

SCHRACK INFO

- For 2 switches of the same or next frame size side by side
- Side-by-side mounting
- Mounted on top of each other, long version
- Contains parts for 2 switches
- Remote operator also required
- For maximum breaking distance, see Page 143

NOTES

Cannot be combined with rotary handles, door coupling rotary handles and early-make auxiliary contacts.

ROTARY HANDLE DIRECTLY ON SWITCH FOR MC4

MC496608

SCHRACK INFO

- Complete with rotary drive
- Can also be combined with door frame

TECHNICAL DATA

Available in the following versions:

Type MC.-XDV

Lockable in the "0" position (up to three padlocks), black/grey

Type MC.-XDVR

Lockable in the "0" position (up to three padlocks), Emergency stop red/yellow

Type MC.-XDTV

Lockable in the "0" position on handle, modification also available in "1" position, black/grey

Type MC.-XDTVR

Lockable in "0" position, Emergency Stop red/yellow

Version comes with door interlock:

- Door frame supplier with door interlock
- Rotary handle can be rotated 90° for switches mounted horizontally
- In the ON position, can be defeated from the outside using a 1 mm pin
- Cannot be defeated in the locked OFF and ON positions
- Door can be opened in OFF
- Can only be switched on when door closed

DOOR COUPLING ROTARY HANDLE FOR MC4

MC494614

MC494614

MC494614

SCHRACK INFO

- Complete including rotary drive and coupling parts
- Degree of Protection IP66
- Rotary handle can be rotated 90° for switches mounted horizontally
- Cannot be defeated in the locked OFF and ON positions
- Can be modified when in the unlocked ON position, can be defeated from the outside with a screwdriver
- Door can be opened in OFF
- External warning plate/designation plate can be clipped on

NOTES

- Order extension shaft separately!

TECHNICAL DATA

Available in the following versions:

Type MC.-XTVD

Lockable in the "0" position on handle with up to three padlocks, with door interlock, black/grey

Type MC.-XTVDV

TUNNEL TERMINAL FOR MC4

MC496836

SCHRACK INFO

- Installed external to switch housing
- Contains parts for one switch side located at top or bottom for 3 pole switches
- Comes with terminal for control circuit cabling as standard for copper conductors, 1 x 0,75 – 2,5 mm², or 2 x 0,75 – 1,5 mm²
- Terminal capacities:
Cu/Al cable 1 x 50 – 240 mm², 4 x 50 – 240 mm²

TECHNICAL DATA

- For Cu- and Al cables, max. 1400A
- Includes cover plate
- Stranded round conductor / stranded sector-shaped conductor

MO AIR CIRCUIT BREAKERS

MO AIR CIRCUIT BREAKERS: NOMINAL CURRENT MAX 6300 A, 3 SWITCHING CAPACITY CLASSES, 6 ELECTRONIC RELEASES, 3- AND 4-POLE VERSIONS

MO air circuit breakers offer full coverage of the 630 - 6300A range with just three contact frame sizes. The nominal current of all contacts can be optimally adjusted to the expansion stage using rating plugs. The smallest rating plug has 250A and at that even with a setting range of 0.4 to 1xI_n.

MO AIR CIRCUIT BREAKERS: STANDARD DIMENSIONS, EASY TO PLAN

The MO has a uniform frame height and -depth for all current ranges. Only the width of the circuit breaker varies, depending on the number of poles and the frame size. MOs for permanent installation and withdrawable models have identical widths.

MO AIR CIRCUIT BREAKERS: CONNECTION SYSTEM

MO circuit breakers up to 5000A come with horizontal connections as standard. The MO 6300A is fitted with vertical connections. The following connections are available as optional extras: Vertical connections, front-side connections and flange connections.

MO AIR CIRCUIT BREAKERS: RATED CURRENT MODULE

This replaceable module allows the user to reduce the nominal current of the device for optimal system adjustment, e.g. when commissioning a sub-system. The correct rating plug to choose is one which most closely matches the system's nominal current.

Classic protection for installations, motors and systems using time-selective grading up to 6300A.

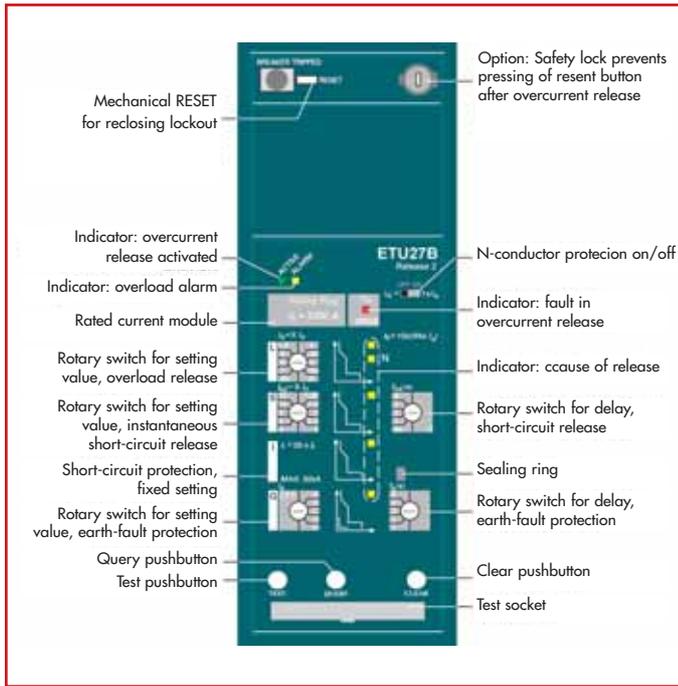

TECHNICAL DATA

- Adjustable overload release with I²t characteristic with time delay $t_R = 10$ seconds at $6 \cdot I_R$
- Short time-delay short-circuit protection, adjustable from $1,25 \dots 12 \cdot I_n$ and
- Instantaneous short-circuit protection, fixed to $20 \cdot I_n$, max. 55kA
- Replaceable rating plug allows instant adaptability to the required system currents, thus ensuring overload protection of 100 A to 6300 A
- Overload indicator
- Display of cause of release through LED
- Option for testing the release
- Setting of protective functions by means of rotary switch

LOCKING DEVICES

SCHRACK INFO

"Safe OFF" switch-independent interlock device to prevent unauthorised closing

This special feature available for draw-out circuit breakers prevents closing independently of the switch, thus satisfying main switch conditions to EN 60204 (VDE 0113) - Mains disconnecting equipment. Unauthorised closing is not possible after replacement of the circuit breaker. The circuit breaker must be switched off to activate the interlock. The interlock device is blocked when the circuit breaker is switched on. The blocking is only effective when the key has been removed. The safety key can only be removed in the "OFF" position.

SCHRACK INFO

Locking device against moving if the cubicle door is open for withdrawable circuit-breakers

The crank handle is blocked if the cubicle door is open and cannot be withdrawn. It is not possible to move withdrawable circuit-breakers. The blocking is only effective if the crank handle is inserted.

Interlocking of cubicle door

The cubicle door cannot be opened if the

- fixed-mounted circuit-breaker is closed (transmission of the locking signal by means of Bowden wire) or
- if the withdrawable circuit-breaker is in connected position

MECHANICAL INTERLOCK

SCHRACK INFO

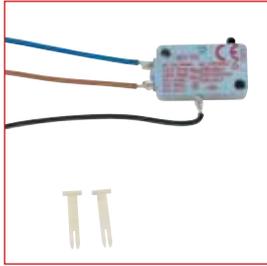

Mutual mechanical circuit-breaker interlocking

The module for mutual mechanical interlocking can be implemented for two or three circuit-breakers and is simple to adapt to the respective version. Fixed-mounted and withdrawable circuit-breakers are compatible and can be implemented together in a single system.

The circuit-breakers can be installed either next to one another or on top of one another, whereby the distance between circuit-breakers is determined only by the length of the Bowden wire.

SIGNALISATION AND CONTROL

MO90AH01

SCHRACK INFO

Ready-to-close signalling switch

MO circuit breaker come with a visual ready-to-close signal indicator as standard. The option is also available to indicate ready-to-close using a signalling switch. This signalling switch is included as standard for switches operated via a communications interface.

Signalling switch for auxiliary release

One signalling contact is available per auxiliary release for polling switch status of the auxiliary releases.

Tripped signal switch

In the event that the circuit breaker tripped due to an overload, short-circuit, earth-fault or extended protection function, this can be indicated with a tripped signal switch. This indicator switch is available as an option. This signalling switch is included as standard for circuit breakers operated via a communications interface.

Operating cycle counter

A 5-digit operating cycle counter is available in connection with the motor operator. The counter increments by "1" once the storage spring is fully charged.

"Electrical ON" button

Used for the electrical switch-on of the circuit breaker via a local, electrical "ON" or remote operation.

Sealable cap covers "Electrical ON" button

The "Electrical ON button" comes with a sealable cap as standard.

Motor cut off switch

Rotary switch for switching off (automatic charging) of motor operator.

SHUTTER

SCHRACK INFO

The cover strips of the shutter lock the laminated contacts of the guide frame if the withdrawable circuit-breaker is withdrawn so that they fulfil the function of a touch guard.

The cover strips can be manually opened with the strip lifter.

The cover strips can be fixed in different positions with padlocks and protected from unauthorized manipulation.

PARAMETERISATION SYSTEMS, COMMUNICATION

DESCRIPTION	ORDER NO.
Breaker Data Adapter (BDA)	
Parameterisation, operation, monitoring and diagnosis of SENTRON circuit breakers via the local interface: Breaker Data Adapter, connecting cable to SENTRON 3WL circuit breakers and to programming device (e.g. laptop); runs on Internet Explorer with JAVA2 VM 1.4.0-01	MO90AT28
BDA Plus	
Same as BDA, also with Ethernet interface for connection to Ethernet/Intranet/Internet	MO90AT33
Connecting cable for BDA Plus	
Connecting cable for connection of BDA Plus to Terminal X8 on SENTRON 3WL circuit breaker. Required when a COM 15 or other external CUBICLE BUS modules are not present, 2 m in length.	MO90BC21
Switch ES Power parameterisation software	
Parameterisation, operation, monitoring and diagnosis of SENTRON circuit breakers via the PROFIBUS DB; Runs on Windows95, Windows98, WindowsNT, Windows2000 and Windows XP Professional also requires additional PROFIBUS card, e.g. CP5613	MO90CC10

TECHNICAL DATA

- Three-phase line 80...500V (phase - phase)
- Connection with external dedicated CT
- Programmable external CT-VT ratio

DISPLAY

- Type of display: LCD backlit, automatic backlit reduction off after 20 s that keyboard is not used
- N° of display points: 10.000, 4 digits (high digit 12 mm)
- Energy count: 8 digit counter (high digit 8 mm)
- Engineering units: automatic display according to the set VT and CT ratios
- Resolution: automatic, with the highest possible number of decimals
- Decimal point: automatic, with the highest possible resolution
- Reading update: 1,1 seconds
- Accuracy (of the reading):
 - Voltage: $\pm 0,5\%$ (80...500V phase - phase)
 - Current: $\pm 0,5\%$ (10...120% In)
 - Powers: $\pm 1\%$ (10...120% Pn/Qn/Sn $\cos \varphi$ 0,5 ind...0,5 cap.)
 - Frequency: $\pm 0,2$ Hz
- Energy count (reference voltage 400 V):
 - Active energy: class 1 (EN62053-21)
 - Reactive energy: class 2 (EN62053-23)

DISPLAY PAGES

Display is divided into four menus which can be reached with the relevant function keys:
voltage / current / power three-phase / power factor

The total active or reactive energy (alternatively) is always displayed on all the display pages.

PROGRAMMING

- Parameters programming: front keyboard, 4 keys
- Programming access: protected by password
- Data and configuration parameters retention: non volatile memory (no battery)

PROGRAMMABLE PARAMETER

INPUT:

- Connection: single-phase and three-phase network, 3 and 4 wire
- Current rating: 1 – 5 A
- External VT ratio: 1...10 (max. VT primary 1200 V)
- External CT ratio: 1...9999 (max. CT primary 50 kA/5A – 10 kA/1A)

CURRENT DEMAND – POWER DEMAND:

- Average period: 5/8/10/15/20/30/60 min.

DISPLAY:

- Contrast: 4 selectable value
- Backlight: 0 – 30 – 70 – 100%
- Customized page: quantity which can be displayed when switches on

INPUT

- Single-phase network, three-phase network 3- and 4-wire
- Three-phase voltage: 80...500V (phase-phase)
- Single-phase voltage: 50...290V
- Connection with external dedicated current transformers
- Current rating In: 5A – 1A
- Max. current I_{max}: 1,2I_n
- Instantaneous overload: 20I_n/0,5 seconds
- Frequency rating f_n: 50Hz
- Tolerance: 47...63Hz
- Type of measurement: true RMS value
- Harmonic content: up to the 16th harmonic
- Voltage rated burden: ≤ 0,5VA (each phase)
- Current rated burden: ≤ 0,5VA (each phase)

AUXILIARY SUPPLY

- Rated value U_{aux ac}: 80...265V
- Rated frequency: 50Hz
- Working frequency: 47...63Hz
- Rated burden: ≤ 4VA (with modules)
- Rated value U_{aux dc}: 110...300VDC
- Rated burden: ≤ 3,5W (with modules)
- Protected against incorrect polarity

INSULATION (EN 61010-1)

- Installation category: III
- Pollution degree: 2
- Insulation voltage rating: 300V (phase neutral)
- Impulse voltage test: 6kV 1,2/50μs 0,5J
- Considered circuits: measure, aux. supply
- A.C. voltage test: 4kV r.m.s. value 50Hz/1min
- Considered circuits: all circuits and earth

TESTS FOR ELETROMAMAGNETIC COMPATIBILITY

- Emission and Immunity tests according to EN 62052-11

ENVIRONMENTAL CONDITIONS

- Reference temperature: 23°C ± 2°C
- Specified operating range: -5...55°C
- Limit range for storage and transport: -25...70°C
- Variation to the class index: ≤ 0,1% /°C
- Suitable for tropical climates
- Max. power dissipation ¹⁾: ≤ 5W
¹⁾ For switchboard thermal calculation

HOUSING

- Housing: flush mounting (panel cutout 92 x 92mm)
- Front frame: 96 x 96 mm
- Depth: 61 mm
- Max. depth: 81 mm (with optional modules)
- Connections: screw terminals (input current) to plug out (input voltage)
- Volmetric terminals range: rigid cable max. 4,5 mm², flexible cable max. 2,4 mm²
- Ammetric terminals range: rigid cable max. 6 mm², flexible cable max. 4 mm²
- Housing material: self-extinguishing polycarbonate

Symbols and explanations for the measuring devices

Symbols for the functioning of the devices		Symbols for device connection	
Description	Symbol	Description	Symbol
Moving coil measuring device		Measuring device for DC	
Moving iron measuring device		Measuring device for AC single phased	
Electrodynamic measuring device		Measuring device for DC and AC single phased	
Induction measuring device		3-phase current general	
Bi-metal measuring device		3-phase current uneven load (general)	
Vibration measuring device		Measuring device for 3-conductor system	
Measuring device with electronics		Measuring device for 4-conductor system	
Electronics with auxiliary measuring device		Two measuring devices for 3-conductors, uneven load	
Shunt		Two measuring devices for 4-conductors, even load	
General accessories		Three measuring devices for 4-conductors, uneven load	

In case of (1) being marked with the symbol for measuring device, electronics is installed. In case of (1) being combined with (2), it means external parts

Symbols for accuracy classes		Symbols for service position		Safety symbols	
Description	Symbol	Description	Symbol	Description	Symbol
Class symbol (e.g. 1.5) with error expressed in % of the reference value, except when the reference value corresponds with the scale length or the real value. Indication error in % of the scale end value	1,5	Devices for perpendicular nominal position		Control voltage 500V	
Indication error in % of the rated value		Devices for horizontal nominal position		Control voltage over 500V e.g. 2kV	
Class symbol for a device without linear scale Used in case of reference value corresponding to scale length and indication error expressed in % of the real value, e.g. cl.1, relative error margin 5% (Par. 2.3.11.36)		Devices for inclined nominal position (e.g. 60° inclination)		No control voltage

Connection to current transformer

SCHRACK-INFO

- These instruments are made from a bi-metal measuring mechanism which shows the maximum current fixed by a red slave pointer, and a moving iron mechanism used to measure momentary current.
- Moving iron mechanism, overcurrent range $2x I_n$, max. intrinsic consumption 1,2 VA, class 1,5
- Bi-metal measuring mechanism, overcurrent range $1,2 I_n$, intrinsic consumption 2,5 VA, class 3
- RBC series, response time 15 min., current-transformer connection $..5A$, requires matching changeable scale
- Frequency 45-65 Hz
- Other changeable scales available upon request

MODULAR, TCSM15 SERIES

MG900220

SCHRACK-INFO

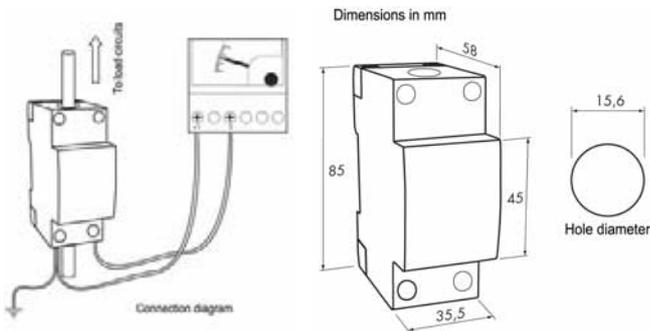

- 2 MW housing with primary max. 15 mm
- Fastenings: DIN rail
- Class 3, 40 - 80 A
- Class 1, 100 -150 A
- Power outputs 2 / 3 / 5 VA
- Secondary current 1 A upon request
- 75 A model upon request

RANGE OF APPLICATION

- Fits all DIN-rail mounted devices such as RCCB switches etc., 45 mm slit
- Easy to thread through
- For crude display of measured value
- Space saving - only 2 MW wide

TIPS & TRICKS

Do not mix up direct of current (energy flow) when pushing through. The secondary load (e.g. 2 VA) must match the measuring device usage!

CURRENT TRANSFORMER – TAR SERIES

TAR

When winding the primary cable around the current transformer, you will obtain half of the primary current with each winding, while output and class remain unchanged.

EXAMPLE:

TAR 4D 200/5A WITH ONE CABLE ENTRANCE CONTAINS 100/5A WITH DOUBLE CABLE ENTRANCE CONTAINS 50/5A WITH 4 CABLE ENTRANCES

TECHNICAL DATA

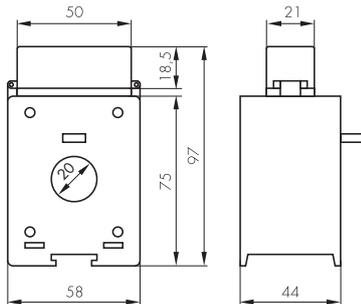

- Observe current supply side P1/K, load side P2/L
- Before opening secondary circuit (e.g. to replace an instrument), firstly short-circuit secondary winding using jumpers S1/k and S2/l.
- Use class 0,5 for calibrated energy meters
 Class 1 for display measuring devices and non-calibrated energy meters
 Class 3 for relays and measuring devices w/o accuracy requirements (crude display)
- Observe load of measurement supply (e.g. 4m 1,5 mm² Cu conductors need 2,31 VA with 5A secondary current)

PROTECTION TYPES FOR ELECTRICAL DEVICES

DEGREES OF PROTECTION: ACCIDENTAL CONTACT AND PROTECTION AGAINST FOREIGN BODIES

First characteristic IP	Protection area	
	Name	Declaration
0 	No protection	No protection for persons against direct contact of active or moving parts No protection of the devices against entering of foreign bodies.
1 	Protection against large foreign bodies	Protection against accidental touching of active and internal moving parts, e.g. by hand, but no protection against deliberate contact with these parts. Protection against entering of foreign bodies with a diameter larger than 50 mm.
2 	Protection against medium-sized foreign bodies	Protection against contact by finger of active or moving parts. Protection against entering of foreign bodies with a diameter larger than 12 mm.
3 	Protection against small foreign bodies	Protection against contact of active or moving parts by tools, wires or similar objects larger than 2.5 mm. Protection against entering of foreign bodies with a diameter larger than 2.5 mm.
4 	Protection against corn-like foreign bodies	Protection against contact of active or moving parts by tools, wires or similar objects larger than 1 mm.
5 	Protection against dust deposits	Total protection against contact of energised parts or moving parts Protection against damaging dust deposits. The entrance of dust is not prevented entirely, but dust is not allowed to enter in such quantities, so that it can alter the functioning.
6 	Protection against dust entrance	Total protection against contact of energised parts or moving parts. Protection against dust entrance.

DEGREES OF PROTECTION: AGAINST WATER

Second characteristic IP	Protection area	
	Name	Declaration
0 	No protection	No special protection.
	Protection against vertically dropping water	Water drops falling vertically may not have any damaging influence.
2 	Protection against inclined dropping water	Water drops falling at an angle up to 15°, may not have any damaging influence.
3 	Protection against spraying water	Water falling at an angle up to 60°, may not have any damaging influence.
4 	Protection against squirting water	Water spraying against the device from all directions may not have any damaging influence.
	Protection against water jet	A jet of water from a nozzle, being directed at the device from either side may not have any damaging influence.
6 	Protection against overflow	Water may not enter the device, in case of an overflow, in such an amount, that it will cause any damage.
	Protection in case of submerging.	Should the device be submerged under water, in given pressure and time conditions, water may not enter the device in such an amount that it will cause any damage.
8 	Protection in case of immersion	Should the device be immersed, water may not enter it in such an amount that it will cause any damage.

General Terms of Delivery

issued by the Austrian Electrical and Electronics Industry Association

1. Scope

- 1.1 These General Terms shall govern legal transactions between business enterprises, namely the delivery of commodities and, mutatis mutandis, the rendering of services. Software transactions are with precedence governed by the Software Conditions issued by the Austrian Electrical and Electronics Industry Association, assembly work by the Terms and Conditions for Assembly Work issued by the Austrian Power Current and Light Current Engineering Industry and or (where applicable) the Terms and Conditions for the Assembly of Electrical Equipment used in Medicine issued by the Austrian Electrical and Electronics Industry (the current versions are available at www.feei.at).
- 1.2 Any departure from the terms and conditions mentioned in 1.1 above shall be valid only if expressly accepted in writing by Seller.

2. Submission of offers

- 2.1 Seller's offers shall be deemed offers without engagement.
- 2.2 Tender documents and project documentation must not be duplicated nor made available to third parties without the permission of Seller. They may be claimed back at any time and shall be returned to Seller immediately if the order is placed elsewhere.

3. Conclusion of contract

- 3.1 The contract shall be deemed concluded upon written confirmation by Seller of an order received or upon dispatch of a delivery.
- 3.2 Particulars appearing in catalog, folders etc. as well as any oral or written statements shall only be binding if Seller makes express reference to them in the confirmation of the order.
- 3.3 Subsequent amendments of or additions to the contract shall be subject to written confirmation.

4. Prices

- 4.1 Prices shall be quoted ex works or ex Seller's warehouse without VAT, packing and packaging, loading, disassembly, take-back and proper recycling and disposal of waste electrical and electronic equipment for commercial purposes as defined by the Ordinance Regulating the Handling of Waste Electrical Equipment. Buyer shall be liable for any and all charges, taxes or other duties levied in respect of delivery. If the terms of delivery include transport to a destination designated by Buyer, transport costs as well as the cost of any transport insurance desired by Buyer shall be borne by the latter. Delivery does not, however, include unloading and subsequent handling. Packaging materials will be taken back only by express agreement.
- 4.2 Seller reserves the right to modify prices if the order placed is not in accordance with the offer submitted.
- 4.3 Prices are based on costs obtaining at the time of the first quotation. In the event that the costs have increased by the time of delivery, Seller shall have the right to adjust prices accordingly.
- 4.4 In carrying out repair orders, Seller shall provide all services deemed expedient and shall charge Buyer for the same on the basis of the work input and/or expenditures required. The same holds for any services or additional services the expediency of which becomes apparent only as the repair order is executed. In such an event special notification of Buyer shall not be required.
- 4.5 Expenses for estimates of costs of repair and maintenance or for expert valuations shall be invoiced to Buyer.

5. Delivery

- 5.1 The period allowed for delivery shall commence at the latest of the following dates:
 - a) the date of order confirmation by Seller;
 - b) the date of fulfillment by Buyer of all the conditions, technical, commercial and other, for which he is responsible;
 - c) the date of receipt by Seller of a deposit or security due before delivery of the goods in question.
- 5.2 Buyer shall obtain whatever licences or approvals may be required from authorities or third parties for the construction of plant and equipment. If the granting of such licences or approvals is delayed for any reason the delivery period shall be extended accordingly.
- 5.3 Seller may carry out, and charge Buyer for, partial or advance deliveries. If delivery on call is agreed upon, the commodity shall be deemed called off at the latest one year after the order was placed.
- 5.4 In case of unforeseeable circumstances or circumstances beyond the parties control, such as all cases of force majeure, which impede compliance with the agreed period of delivery, the latter shall be extended in any case for the

- duration of such circumstances; these include in particular armed conflicts, official interventions and prohibitions, delays in transport or customs clearance, damages in transit, energy shortage and raw materials scarcity, labor disputes, and default on performance by a major component supplier who is difficult to replace. The aforesaid circumstances shall be deemed to prevail irrespective of whether they affect Seller or his subcontractor(s).
- 5.5 If a contractual penalty for default of delivery was agreed upon by contracting parties when the contract was concluded, it shall be executed as follows, and any deviations concerning individual items shall not affect the remaining provisions: Where delay in performance can be shown to have occurred solely through the fault of Seller, Buyer may claim for each completed week of delay an indemnity of at most one half of one per cent, a total of no more than 5 %, however, of the value of that part of the goods to be delivered which cannot be used on account of Seller's failure to deliver an essential part thereof, provided the Buyer has suffered a damage to the aforesaid extent. Assertion of rights of damages exceeding this extent is precluded.

6. Passage of risk and Place of performance

- 6.1 Enjoyment and risk shall pass to Buyer at the time of departure of the goods ex works or ex warehouse regardless of the terms of quotation (such as carriage paid, C.I.F. etc.) agreed upon. This provision also includes the case of shipment being effected, organised and supervised by Seller and the case of delivery being made in connection with assembly work to be undertaken by Seller.
- 6.2 For services the place of performance shall be the place at which the service is rendered; the risk in respect of such services or any part thereof that may have been agreed upon shall pass to Buyer at the time the services have been rendered.

7. Payment

- 7.1 Unless otherwise agreed, one third of the purchase price shall fall due at the time of receipt by Buyer of the order confirmation of Seller, one third after half the delivery period has elapsed and the balance at the time of delivery. Irrespective thereof the turnover tax comprised in the amount of the invoice shall be paid within 30 days of the invoice date.
- 7.2 In the case of part settlements the individual part payments shall fall due upon receipt of the respective invoices. The same shall apply to amounts invoiced for additional deliveries or resulting from additional agreements beyond the scope of the original contract, irrespective of the terms of payment agreed upon for the principal delivery.
- 7.3 Payment shall be made without any discount free Seller's domicile in the agreed currency. Drafts and checks shall be accepted on account of payment only, with all interest, fees and charges in connection therewith (such as collection and discounting charges) to be borne by Buyer.
- 7.4 Buyer shall not be entitled to withhold or offset payment on the grounds of any warranty claims or other counterclaims.
- 7.5 Payment shall be deemed to have been effected on the date at which the amount in question is at Seller's disposal.
- 7.6 If Buyer fails to meet the terms of payment or any other obligation arising from this or other transactions, Seller may without prejudice to his other rights
 - a) suspend performance of his own obligations until payments have been made or other obligations fulfilled, and exercise his right to extend the period of delivery to a reasonable extent,
 - b) call in debts arisen from this or any other transactions and charge default interest amounting to 1.25 % per month plus turnover tax for these amounts beginning with the due dates, unless Seller proves costs exceeding this.In any case Seller has the right to invoice all expenses arising prior to a lawsuit, especially reminder charges and lawyer's fees.
- 7.7 Discounts or bonuses are subject to complete payment in due time.
- 7.8 Seller retains title to all goods delivered by him until receipt of all amounts invoiced including interests and charges. Buyer herewith assigns his claim out of a resale of conditional commodities, even if they are processed, transformed or combined with other commodities, to Seller to secure the latter's purchase money claim. In the case of resale granting respite Buyer shall have the power of disposal of the product under retention of ownership only with the proviso that upon reselling Buyer notifies the secondary buyer of the assignment for security or enters the assignment in his account books. Upon request Buyer has to notify the assigned claim and the debtor thereof to Seller, and to make all information and material required for his debt collection available and to notify the assignment to the third-party debtor. If the goods are attached or otherwise levied upon, Buyer shall draw attention to Seller's title and immediately inform Seller of the attachment or levy.

GENERAL TERMS OF DELIVERY

- 8. Warranty and acceptance of obligation to repair defects**
- 8.1 Once the agreed terms of payment have been complied with, Seller shall, subject to the conditions hereunder, remedy any defect existing at the time of acceptance of the article in question whether due to faulty design, material or manufacture, that impairs the functioning of said article. From particulars appearing in catalogues, folders, promotional literature as well as written or oral statements which have not been included in the agreement no warranty obligations may be deduced.
- 8.2 Unless special warranty periods operate for individual items the warranty period shall be 12 months. These conditions shall also apply to any goods supplied, or services rendered in respect of goods supplied, that are firmly attached to buildings or the ground. The warranty period begins at the point of passage of risk acc. to paragraph 6.
- 8.3 The foregoing warranty obligations are conditional upon the Buyer giving immediate notice in writing of any defects that have occurred and such notice reaching the Seller. Buyer shall prove immediately the presence of a defect, in particular he shall make available immediately to Seller all material and data in his possession. Non-observance of Buyer's obligation to give immediate notice of the defect invalidates the right of claiming consequential harm caused by a defect. Upon receipt of such notice Seller shall, in the case of a defect covered by the warranty under 8.1 above, have the option to replace the defective goods or defective parts thereof or else to repair them on Buyer's premises or have them returned for repair, or to grant a fair and reasonable price reduction.
- 8.4 Any expenses incurred in connection with rectifying defects (e. g. expenses for assembly and disassembly, transport, waste disposal, travel and site-to-quarters time) shall be borne by Buyer. For warranty work on Buyer's premises Buyer shall make available free of charge any assistance, hoisting gear, scaffolding and sundry supplies and incidentals that may be required. Replaced parts shall become the property of Seller.
- 8.5 If an article is manufactured by Seller on the basis of design data, design drawings, models or other specifications supplied by Buyer, Seller's warranty shall be restricted to non-compliance with Buyer's specifications.
- 8.6 Seller's warranty obligation shall not extend to any defects due to assembly and installation work not undertaken by Seller, inadequate equipment, or due to non-compliance with installation requirements and operating conditions, overloading of parts in excess of the design values stipulated by Seller, negligent or faulty handling or the use of inappropriate materials, nor for defects attributable to material supplied by Buyer. Nor shall Seller be liable for damage due to acts of third parties, atmospheric discharges. Excess voltage and chemical influences. The warranty does not cover the replacement of parts subject to natural wear and tear. Seller accepts no warranty for the sale of used goods.
- 8.7 The warranty shall lapse immediately if, without written consent of Seller, Buyer himself or a third party not expressly authorised undertakes modifications or repairs on any items delivered.
- 8.8 Claims acc. to § 933b ABGB are struck by the statute of limitation with lapse of the period mentioned under point 8.2.
- 8.9 The provisions of sub-paragraphs 8.1 to 8.7 shall apply, mutatis mutandis, to all cases where the obligation to repair defects has to be accepted for other reasons laid down by law.
- 9. Withdrawal from contract**
- 9.1 Buyer may withdraw from the contract only in the event of delays caused by gross negligence on the part of Seller and only after a reasonable period of grace has elapsed. Withdrawal from contract shall be notified in writing by registered mail.
- 9.2 Irrespective of his other rights Seller shall be entitled to withdraw from the contract
- a) if the execution of delivery or the inception or continuation of services to be rendered under the contract is made impossible for reasons within the responsibility of Buyer and if the delay is extended beyond a reasonable period of grace allowed;
 - b) if doubts have arisen as to Buyer's creditworthiness and if same fails, on Seller's request, to make an advance payment or to provide adequate security prior to delivery, or
 - c) if, for reasons mentioned in 5.4, the period allowed for delivery is extended by more than half of the period originally agreed or by at least 6 months.
- 9.3 For the reasons given above withdrawal from the contract shall also be possible in respect of any outstanding part of the delivery or service contracted for.
- 9.4 If bankruptcy proceedings are instituted against any contracting party or an application for bankruptcy proceedings against that party is not granted for insufficiency of assets, the other party may withdraw from the contract without allowing a period of grace.
- 9.5 Without prejudice to Seller's claim for damages including expenses arising prior to a lawsuit, upon withdrawal from contract any open accounts in respect of deliveries made or services rendered in whole or in part shall be settled according to contract. This provision also covers deliveries or services not yet accepted by Buyer as well as any preparatory acts performed by Seller. Seller shall, however, have the option alternatively to require the restitution of articles already delivered.
- 9.6 Withdrawal from contract shall have no consequences other than those stipulated above.
- 9.7 The assertion of claims on the ground of *laesio enormis*, error, or lapse of purpose by the Buyer is excluded.
- 10. Disposal of waste electrical and electronic equipment**
- 10.1 The Buyer of electrical/electronic equipment for commercial purposes, incorporated in Austria, is responsible for the financing of the collection and treatment of waste electrical and electronic equipment as defined by the Ordinance Regulating the Handling of Waste Electrical Equipment, if he is himself the user of the electrical/electronic equipment. If the Buyer is not the end user, he shall transfer the full financial commitment to his customer by agreement and furnish proof thereof to the Seller.
- 10.2 The Buyer incorporated in Austria shall ensure that the Seller is provided with all information necessary to meet the Seller's obligations as manufacturer/importer, particularly according to §§ 11 and 24 of the Ordinance Regulating the Handling of Waste Electrical Equipment and the Waste Management Act.
- 10.3 The Buyer incorporated in Austria is liable vis-à-vis the Seller for any damage and other financial disadvantages incurred by Seller due to Buyer's failure to meet or fully meet his financing commitment or any other obligations according to Article 10. The Buyer shall bear the burden of proof of performance of this obligation.
- 11. Seller's liability**
- 11.1 Outside the scope of the Product Liability Act, Seller shall be liable only if the damage in question is proved to be due to intentional acts or acts of gross negligence, within the limits of statutory provisions. Seller shall not be liable for damage due to acts of ordinary negligence nor for consequential damages or damages for pure economic loss, loss of profits, loss of savings or interest or damage resulting from third-party claims against buyer.
- 11.2 Seller shall not be liable for damages in case of non-compliance with instructions for assembly, commissioning and operation (such as are contained in instructions for use) or non-compliance with licensing requirements.
- 11.3 Claims that exceed the contractual penalties that were agreed on are excluded from the respective title.
- 12. Industrial property rights and copyrights**
- 12.1 Buyer shall indemnify Seller and hold him harmless against any claims for any infringement of industrial property rights raised against him if Seller manufactures an article pursuant to any design data, design drawings, models or other specifications made available to him by Buyer.
- 12.2 Design documents such as plans and drawings and other technical specifications as well as samples, catalogues, prospectuses, pictures and the like shall remain the intellectual property of Seller and are subject to the relevant statutory provisions governing reproduction, imitation, competition etc. The provisions of 22 above shall also cover design documents.
- 13. General**
- Should individual provisions of the contract or of these provisions be invalid the validity of the other provisions shall not be affected. The invalid provision shall be replaced by a valid one, which comes as close to the target goal as possible.
- 14. Jurisdiction and applicable law**
- Any litigations arising under the contract including litigations over the existence or non-existence thereof shall fall within the exclusive jurisdiction of the competent court at Seller's domicile; the competent court of the Bezirksgericht Innere Stadt, Vienna, shall have exclusive jurisdiction if Seller is domiciled in Vienna. The contract is subject to Austrian law excluding the referral rules. Application of the UN Convention on Contracts for the International Sale of Goods is renounced.
